FOREWORD

The Education Abstract is an annual publication that is dependent on the Annual School Census (ASC) that provides information on quality and relevant education to our Region and country as well. The Annual School Census is used to assess the performance of the sector against set targets of educational indicators and informed policies of education sector. Indeed, this 2007 E.F.Y annual abstract report includes all information of education sub-sectors and programs such as Pre-primary, Primary, Secondary, Preparatory and College of Teachers Education sub-sectors and Non-Formal Education program as well. It also high lights the key indicators of access, equity, internal efficiency and quality of education achieved in the Region.

Therefore, I wish to thank our staffs who participated in getting all the information in this document from schools up to Bureau level. Special thanks also go to our development partners for the financial and technical supports. In the same vein, I also wish to recognize all those who in different capacities have made this publication a reality. Lastly, we appreciate the comments you always make on our publication, so as to improve our subsequent edition.

Merga Feyissa Tulu
Bureau Head

Introduction

The vision of Oromia Education Bureau is to provide quality education for all. The overall goal is also to provide relevant and quality education for all citizens most especially for disadvantaged, to enable those acquiring skills which will make them functionally literate and productive to facilitate poverty alleviation and promote the rapid socio-economic growth of the Region as well as the country.

The Mission of Oromia Education Bureau is to provide, support, guide, coordinate, regulate and promote quality education to all persons in the region for national integration. Our mandate is also to plan, formulate, analyze, monitor, evaluate and review policies, providing technical support and guidance, and set regional standards for the Education Sector based on National frame work.

The Oromia Education Bureau policy priorities are; to ensure universal and equitable access to quality education for all children, to improve the quality of Education at all levels, to ensure equal access by Gender, disadvantage locality and special needs at all levels and to build capacity of educational leadership for planning, implementation, monitoring and accountability.

The annual education census exercise allows the Oromia Education Bureau to collect all the necessary information about education in Oromia. This information is used as an input into planning and monitoring the provision of quality and relevant education for the Region. It is intended that the census should address the information needs of all stakeholders. In its efforts to improve on the timeliness, accuracy, reliability and availability of information to various users, The Ministry of Education design and implement EMIS both by developing the necessary software and re-engineering practices and procedures in collaboration to regional Education Bureau. Despite the numerous efforts, decentralization of the EMIS data base has not taken off at district level due to infrastructure and capacity (human and financial) constraints. However, a lot has been achieved in terms of decentralizing the EMIS data base at zonal level. Additionally, success has been made in implementing data management and capacity building at various levels and the struggle is still on.

I. Data Gathering

The ASC 2014/15 covered all educational institutions across the Region. There are 18 zones, 12 Administrative Towns, 298 districts and 2519 Cluster Resource Centers (CRC) in the Region.

- The Regional EMIS team conducted the ToT training for all District Education Office (DEO), Zonal/Admin Town Education offices (ZEO) statistician on annual census questioners, and the ToT trainers also conduct training for CRC supervisors and school directors at CRC level.
- The CRC supervisors, DEO and ZEO statisticians were overseeing the filling, retrieval and authentication of filled questioners by the school Directors,
- The Regional EMIS team was conducting ToT, overseeing the distribution and collection of census questioners.
- The exercise of gathering data was implemented over a maximum of 21 days, depending on the number and size of the districts in each of the clusters.
- The first half of the exercise was spent on conducting of the training of Trainer workshops at Regional, zonal and District level for statisticians. The objectives of the workshops were to brief how to fill the questioner. Filling of ASC 2014/15 questionnaires by school directors were completed within 7days. Finally, verification and authentication of filled census questionnaires by respective district Education officials.
- The last half of the exercise was spent on checking, verification and retrieval of authenticated questionnaires by the Zonal officials and settling conditions for data entering at zonal level.

II. Data Processing and Verification

Data entry was done by data entry clerks hired to specifically enter data under the supervision of the EMIS technical team at zonal level. It is captured using the EMIS database soft ware operating on a local area network. During data entry only questionnaires without errors were entered and incorrectly filled questionnaires were either referred to respondents or edited by Zonal staff. Data verification was held at zonal and regional level, so as to ensure its quality was and to limit the time spent on data cleaning.

III. Data Validation

Regional EMIS team carried out verification exercises as sample studies to verify the EMIS database. Following this the draft of educational annual Abstract of the year 2014/15, were developed and then circulated among the directorate and work process of the Regional Education Bureau for comments, and the comments were applied in the refinement of annual abstract development.

EXECUTIVE SUMMARY

Oromia Education Bureau gathers, compiles, analyses and disseminates educational information annually that covers all education subsectors i.e. Pre-primary, Primary, Secondary, Preparatory, Non-formal Education and CTE. In the same phenomenon, data from schools was collected during ASC 2014/15, compiled and analyzed in this publication. Data about students' performance obtained from National and Regional Examination was also analyzed as indicated in the findings. The summaries of key findings from the 2014/15 ASC by subsector are presented here below;

1.1. Pre-Primary Schools

- The total enrolment of 723,851 was registered in the 12,102 pre-primary (KG, PPAPS and C to C) institutions that responded to the 2014/15 ASC with a female enrolment share of 47.4%.
- The total number of teachers in Kindergarten schools was 5,926 (73.5% of female) that tells us the Pupil Teacher Ratio (PTR) of the level is 1:30. This is an indication that for every 30 pupils in Kindergarten there is a teacher to take care.
- The Census recorded 4887 classrooms translating into a Pupil Section Ratio (PSR) of 37:1 implying that for each Kindergarten classroom there is an average of 37pupils.
- However, the proportion of children those enrolled in pre-primary (KG, PPAPS and C to C) to the population of total 4 to 6 years old children in the region, is meant to be low, 22%. This is an indication that 78% of the population is meant to be not in pre-primary.

1.2. Primary Schools

- A total of 13,346 primary schools returned the ASC 2014/15 questionnaires. Of these, 12,474 are Government owned while 982 are Non-Governmental.
- The total enrolment in those 13,346 primary schools was 6,841,930 (3,651,536 male and 3,190,394 female). This shows that the gender parity gap has still fewer than 50% with female having a slightly lower share of 46.6%. Government schools enumerated registered total enrolment of 6,625,021 (3,541,431 male and 3,083,590 female).
- A total of 128,934 teachers (77,588 male and 51,346 female) were registered in all primary schools with a gender imbalance of 60.2% in favor of male teachers that shows, Pupil Teacher

Ratio (PTR) of 53:1. In Government schools there were 121,622 (48,836 male and 72,786 female) teachers showing PTR of 55:1 which is slightly higher than the overall ratio by 2.

- A total of 119,596 sections were recorded during the ASC 2014/15. This translates into a Pupil Section Ratio (PSR) of 57.

1.3. Secondary Schools

- 861 secondary Grade (9-10) schools (775 Government and 86 Non Government schools) responded to the 2014/15 ASC. In those schools student enrolment reaches 559,814 of which (303,389 are male and 256,425 are female). Government schools had a total of 646,426 (353,121 male and 293,305 female) students.
- A total of 20,712 teachers (16.24% female) were recorded during the ASC 2014/15 translating to Student Teacher Ratio (STR) of 27:1. This implies that on average each 27 students are attended by one teacher.
- The registered sections in 2014/15 were 9,480 this translates into a Pupil Section Ratio (PSR) of 59.

1.4. Preparatory Schools

A total of 295 preparatory schools responded to the 2014/15 ASC of which 266 were government schools 116,195(64,757 male and 51,438 female) students were enrolled for this cycle, among them 94.4% were in government institutions. In all preparatory schools the share of girl's parity gap was 44.3%. This shows that the gender parity gap has still far from average 50% by 5.7%. A total of 5,512 teachers were registered in all the preparatory schools enumerated which translate to a student to teacher ratio of 21. It implies that regionally each 21 students in preparatory schools are attended by one teacher. The registered classrooms in 2014/15 were 2,297. This interprets into a Pupil Section Ratio (PSR) of 51.

1.5. ABE and IFAL Program

- A total of 2491 ABE centers responded to the 2014/15 ASC. Majority of them are owned by Government.
- A total of 156,053 (88,691 male and 67,362 female) learners were registered in these ABE centers where 43.2% of them were girls. A total of 6,786 Facilitator (32% female) were recorded

during the ASC 2014/15 translating to Student to Facilitator Ratio (SFR) of 23:1. This implies that on average each 23 students are attended to one facilitator.

- A total of 17,843 IFAL centers responded to the 2014/15 ASC. A total of 2,577,894 (1,448,509 male and 1,129,385 female) learners were registered in these centers of which 43.8% of them were female.
- A total 62,883 Facilitator (38.4% female) were recorded during the ASC 2014/15 translating Adult to Facilitator Ratio (AFR) of 41:1. This implies that on an average each 41 adults are attended to one facilitator. The program was implemented with integration of different sectors such as Education, Health, Agriculture, Micro Business and the like.

1.6. College of Teachers Education

- All the 12 College of Teachers Education (CTE) in the region were responded to the 2014/15 ASC and all of them are government owned.
- A total of 15,691 regular students (7,313 male and 8,378 female) were registered for all modalities in all CTE institutions, of which 53.4% are female.
- For in-service-training program 24,036 summer diploma student teachers (16,434 male and 7,602 female) were registered for all modalities in all CTE institutions, of which 46.26% are female.
- A total of 584 instructors/lecturers were registered with a gender imbalance of 94.4% in favor of male. Regarding qualification, around 68.8% of them had attained master degree and none of them had Phd.
- All are Full time teachers of which (553 are male and 31 are female). The ratio of Student to instructors/Lecturer in CTE institutions was 28:1.

1.7. Limitations of Data

Responses to the census were received from pre-primary, primary, secondary, preparatory schools, ABE and IFAL centers and college of teachers' institutions. It is vital to note that of late schools response has greatly improved especially in the private owned schools. The age data supplied may to some extent have some misreporting since the primary source of data is the school director who may not be very familiar with the correct ages of some of the pupils. In addition age data records, in most cases families of pupils are very inadequately managed of their kids' age.

The definitions on school location were structured in reference to facilities and geographical location. But in practice the characteristics appear different yet they qualify for different geographical location. Categorization of locations by school director was difficult since the terms apply differently and are relative in meaning. This statistical abstract has been compiled from data relating to only the institutions that returned their ASC forms.

CHAPTER ONE

1. General Education

1.1. Pre-Primary Education

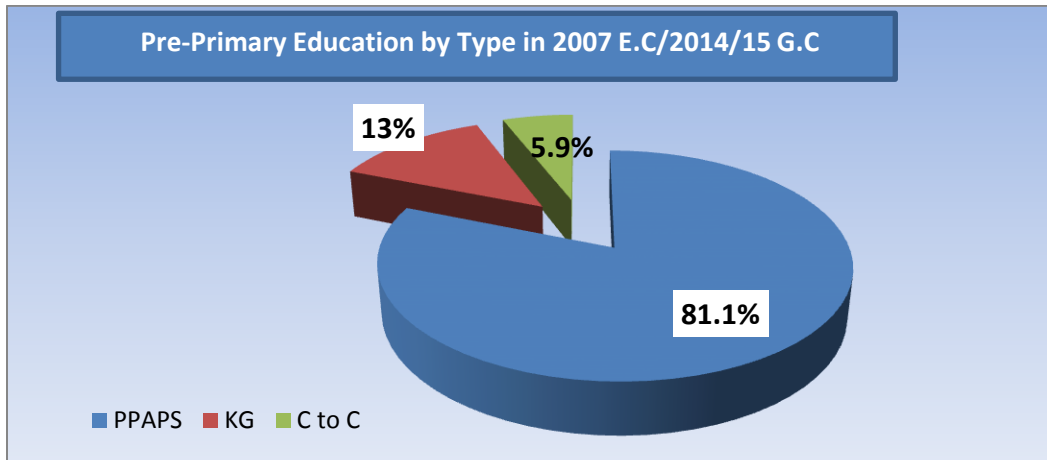

1.1.1. Introduction

The Oromia National Regional Government Education Bureau recently embarked on development of the pre-primary sub sector since constructive impact on further learning in primary education and beyond significantly dwells on Early Childhood Development (ECD) education. Developments have been under taken to boost the performance in this subsector to achieve EFA goals; for instance the development of the early childhood curriculum & teacher training among others. Pre-primary Education basically includes enrollment of children from age 4-6. Non-governmental organizations, communities, private institutions and religious based organizations are the operators of kindergarten program whereas, government is involved in developing curriculum, teachers' training and providing supervisory supports for kindergarten program. Additionally, our Regional Education Bureau was involved on pre-primary attached to primary schools (PPAPS) and child to child program to access rural children of the level.

1.1.2. School Information

A total number of 12,102 pre-primary respondents replied to the ASC 2014/15. As illustrated on Chart 1 below, out of these pre- primary schools the majority 9,817 (81.1%) were PPAPS followed by KG 1,543 (13%) and lastly 742 (5.9%) were Child to Child centers.

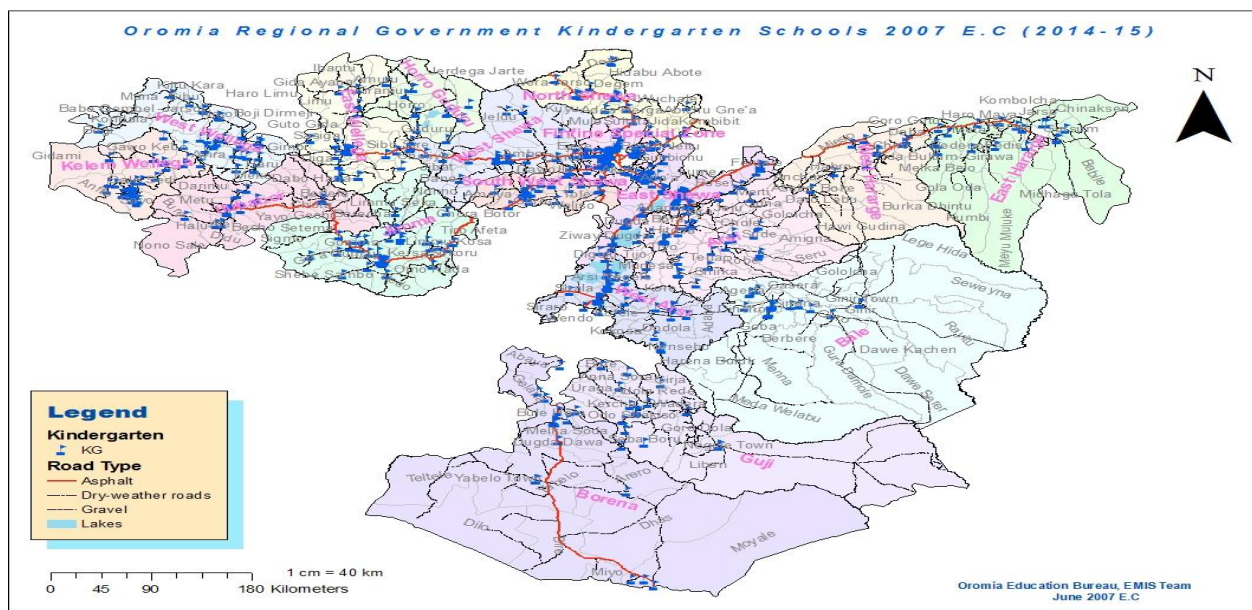

Graph 1: Pre-Primary Education by Type

Most Government primary schools, more than 75%, have been applying ECDs as annexes. Since the development of the ECD curriculum was supported by Government, there is a direction that all Government primary schools have to conduct the program; that is why most of the schools are currently involved in the implementation of Early Childhood Education.

Results from the ECD census indicate that majority of the ECD centers are attached to primary schools with a percentage composition of 81.1% whereas 18.9% of the centers are not attached.

Map 1. Kindergarten Schools Location Map at Regional Level

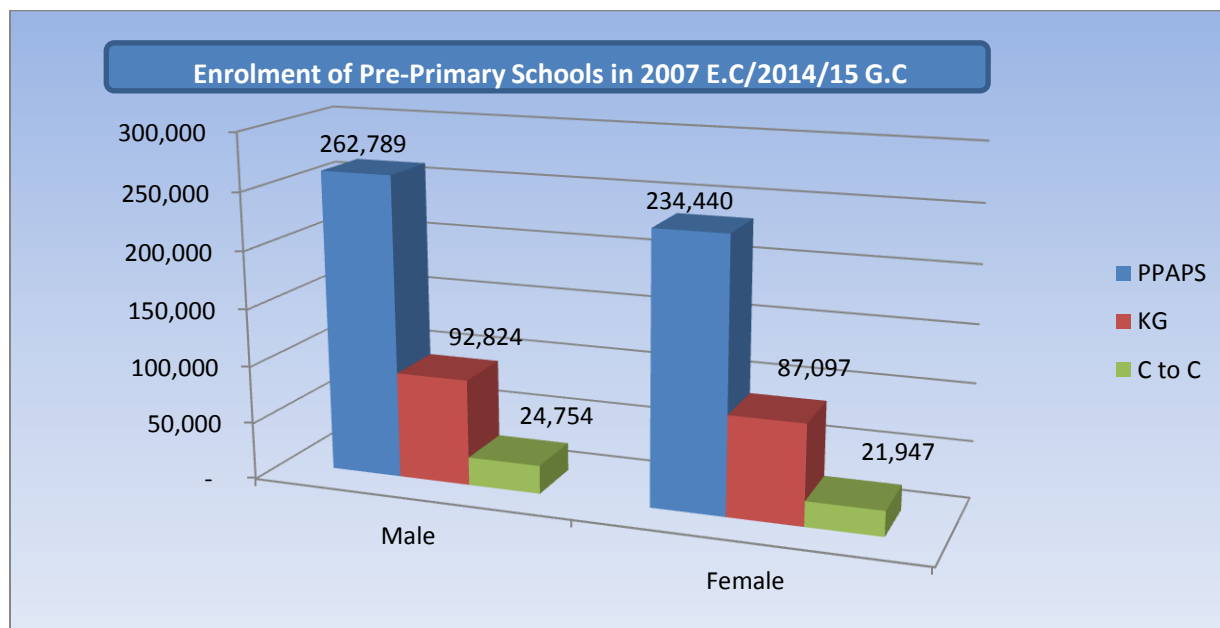

As Map 1 shows, the distribution of most of KGs in the Region were located in urban areas, whereas if we look at zonal level the highest number of KGs (50) are in East Shoa Zone, and the lowest (11) are in Horo Guduru Wollega. As we can observe from the distribution of the GIS school location point data of KGs in the region, all zones and administrative towns needs due attention in increasing access of kindergarten schools in all unreached woredas.

Moreover, when we look at Table 1.1, the availability of KGs is insufficient across the region, for example, 566 KGs (36.7%) are found only in urban areas, amongst Adama town has 107 KGs, so that the issue needs attention to minimize the disparity gap of urban and rural.

1.1.3. Enrolment in Pre-Primary Education

As can be seen from graph 2, below, a total enrolment of 723,851 pupils was registered with a slight gender imbalance of 52.6% in favor of boys. Of these, PPAPS class enrolment had the largest share of 497,229 (47.2% female share) followed by KG which had 179,921 (48.4% are female) share, whereas C to C had the least share of 46,701 (47% female).

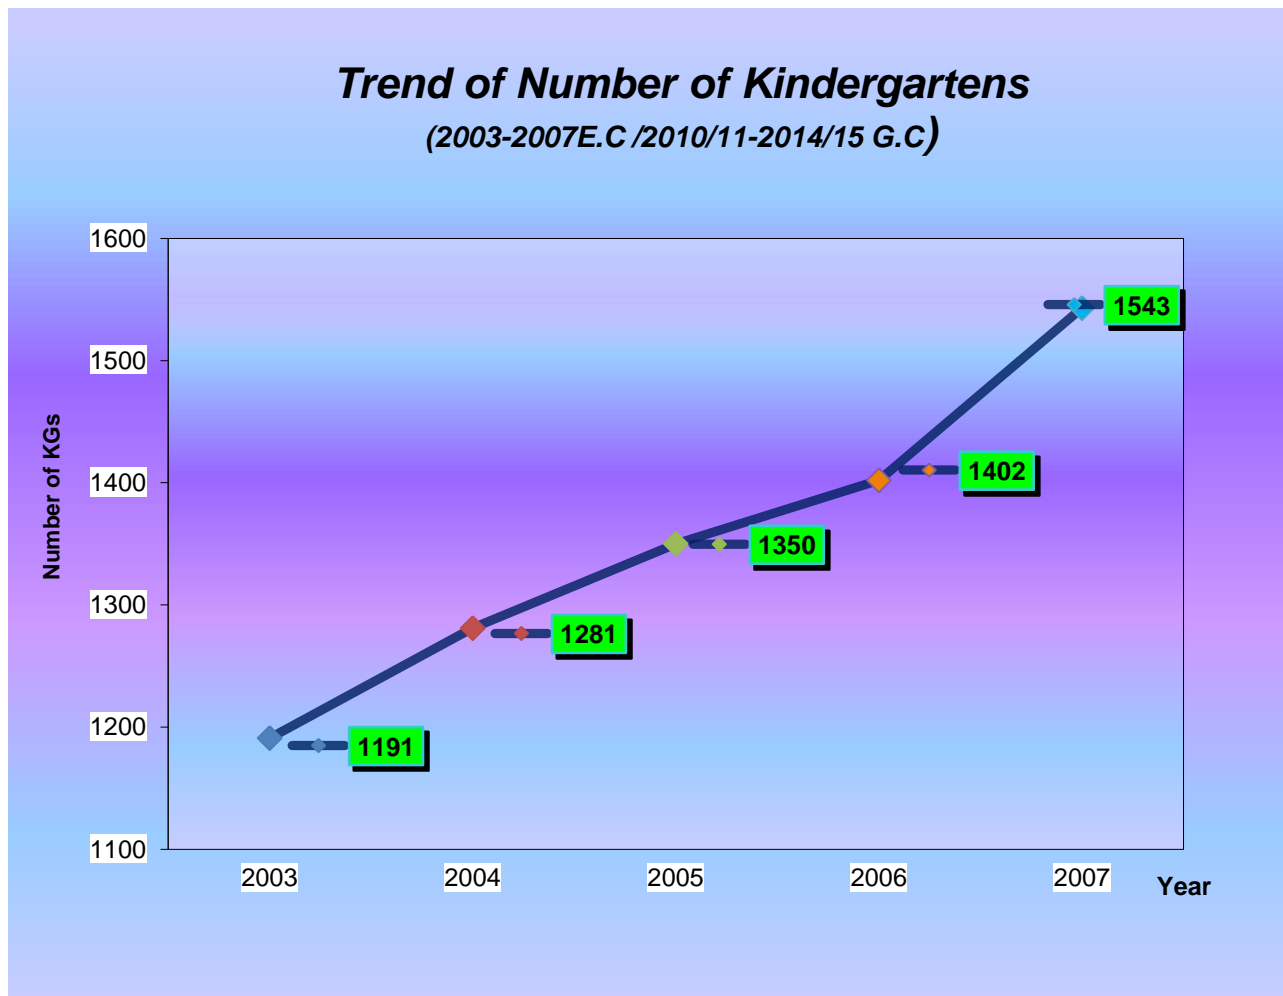

Graph 2: Enrolment of Pre-Primary Schools

Graph 3 and 4, below shows that, the number of KGs increased from 1,191 in 2003 E.C to 1543 in 2007 E.C and enrolment in KGs has increased from 123,415 in 2003 E.C to 179,921 in 2007

E.C. The AAGR of schools were 6.7% while the enrolment was 9.9%, the enrolment growth shows that it is slow. Preprimary enrolment needs to be move forward faster to improve the low GER of the sector, in comparison to the high number of preprimary school age children. As the data of SAP of preprimary children indicates most of children are still out of preprimary schools. Policies and strategies need to be implemented with the Growth and Transformation Plan of Education sector, to achieve the desired fast growth.

Graph 3: Trend of Number of Kindergartens

Graph 4: Trend of Enrolment of Kindergartens

1.1.4. Gross Enrolment Rates in Pre-primary Education

GER of pre-primary education is defined as the percentage of total number of children in the level out of total population of 4-6 age, irrespective of age groups in the region or in a given zones.

As shown from Table 1.2 below, the Gross Enrolment Rate (GER) for Kindergarten (KG), Pre-Primary Attached to Primary Schools (PPAPS) and Child to Child program in 2007 E.C. was 21.9% (M= 22.7% F= 21.0%). When we consider only KGs the figure falls drastically to 5.4 %. The gender parity index in 2007 E.C. was 0.93, which shows that there are more boys than girls in the system.

Graph 5: Zonal Comparison of GER in Preprimary

As indicated on Graph 5 above, when GER and GPI of the zones and Administrative towns compared to the regional average, GER of 6 zones and all Administrative towns is greater than the regional average whereas, regarding to the gender equity 8 administrative towns and 11 zones also have GPI greater than or equal to the regional aggregate.

Table 1. 2: Pre Primary education GER

1.1.5. Teachers in Pre-primary Schools

As can be seen from Table 1.3 below, a total of 5,926 teachers were registered in Kindergarten schools with 73.5 % of female teachers comprising a considerably bigger than male. Apparently, teaching for PPAPS was covered by primary first cycle teachers side by side, whereas child to child program were held by trained young facilitators.

1.1.6. Quality Indicators in Pre-Primary Education

Quality indicators in this subsector will include Pupil Teacher Ratio (PTR) and Pupil section Ratio (PSR). Efficiency indicators provide a picture on the learning/teaching classroom environment in terms of overcrowding, pupil–teacher contact, and availability of learning/teaching materials. For all these indicators, a lower value leads to reduced levels of overcrowding or reduced competition for classroom resources and implies better learning conditions.

1.1.6.1. Pupil Teacher Ratio (PTR)

PTR gives an indication of contact between pupils and teachers in a classroom. If it is lower, then there are high chances of contact between a teacher and pupils and teachers will have enough time to check homework and class work. In other words the lower the PTR the better teaching learning process are. The overall PTR realized in kindergarten schools was 30 however; the indicator was subjected to variation across the zones with Administrative Towns having the best performance approximately the average of 26 pupils per each teacher. For details refer to table 1.3 above.

1.1.6.2. Pupil Section Ratio (PSR)

An overall PSR of 37:1 was registered regionally, with the Administrative towns having the best average of 31 per each section. For details refer table 1.3 above.

2. Primary Education

In Ethiopia, primary education is defined as education in Grades 1-8 in two cycles 1st cycle, (grades 1-4) and 2nd cycle (grades 5-8). The program is normally designed on a unit or project based on basic education to develop pupils’ ability to obtain and use information they need, about their home, environment/community or the country.

2.1. Primary Schools Information

2.1.1 Number of Primary Schools by Ownership, Cycle & Number of CRCs

According to the 2014/15 OEB, EMIS database there were 13,346 primary schools in the Region, of which all responded to ASC. This number shows an increment of 4.3% when compared to 12,792 primary schools in 2013/14. As table 2.3 shows, out of these primary schools 3995 were first cycle primary (grade 1-4) and 9351 were second cycle primary (grade 5-8). Concerning the ownership as Graph below indicates, out of the respondent schools 12,474 (93.5%) were government owned whereas the rest were owned by non government. For more details refer table 2.1& 2.2 below.

2.1.2. Geographical Locations of Primary Schools in the Region

Map 1. Primary First Cycle Geographical Locations

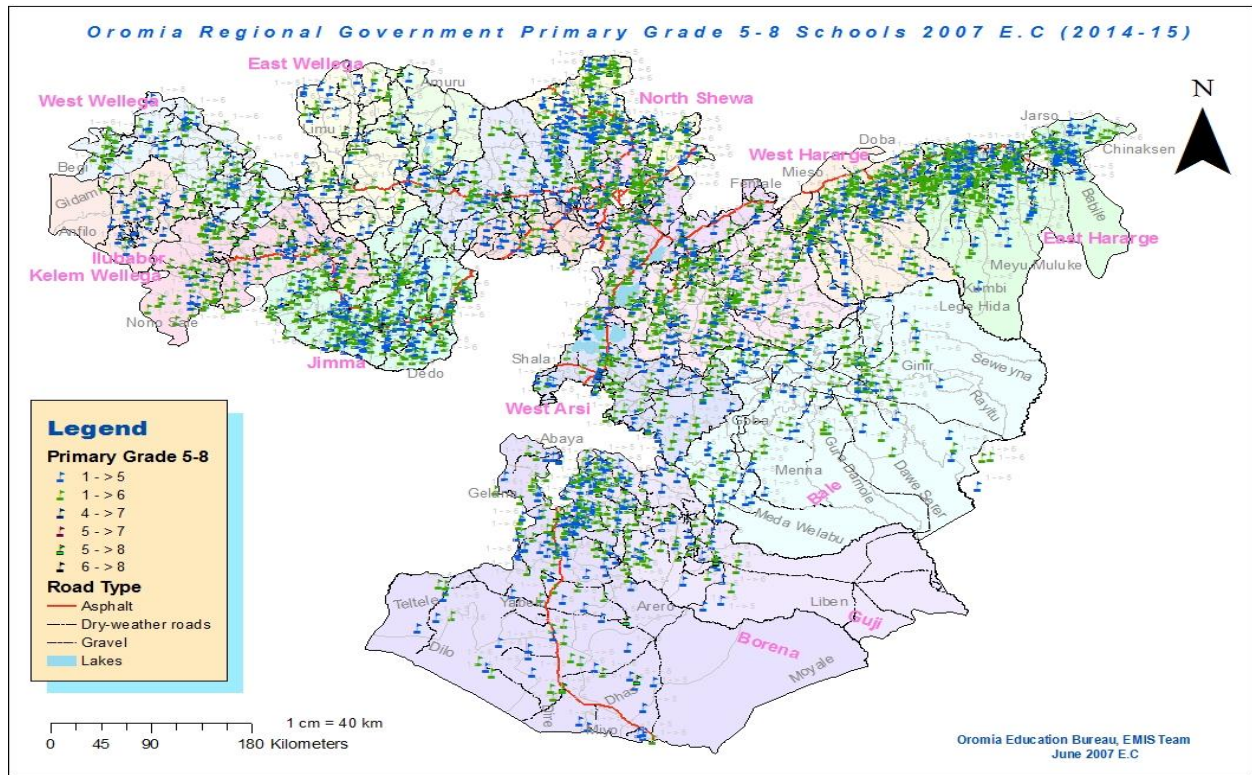

Map 2, shows the distribution of primary 1st cycle schools and ABE centers in the Region. The map is sketched with the scale of 1 cm on the paper to 40 km on the land. As we can see from the map schools are very dense in Northern and central parts of the region, whereas scattered in the south and almost no schools at all in south East areas, because most of these areas are served for grazing purposes for pastoral society or it is covered by forest. Moreover, this point data shows schools by grade level with different colors and accessibility of types of road as well.

As the map indicates, most of pastoral areas are still unreached to primary 1st cycle within 3 km buffer zone; in order to achieve government policy “every child has not to move more than 3 km from his/her home for schooling.” So, support and attention of Government is needed to access those pastoral areas for schooling.

2.1.3. Geographical Locations of Primary Second Cycle (Grade 5-8) schools

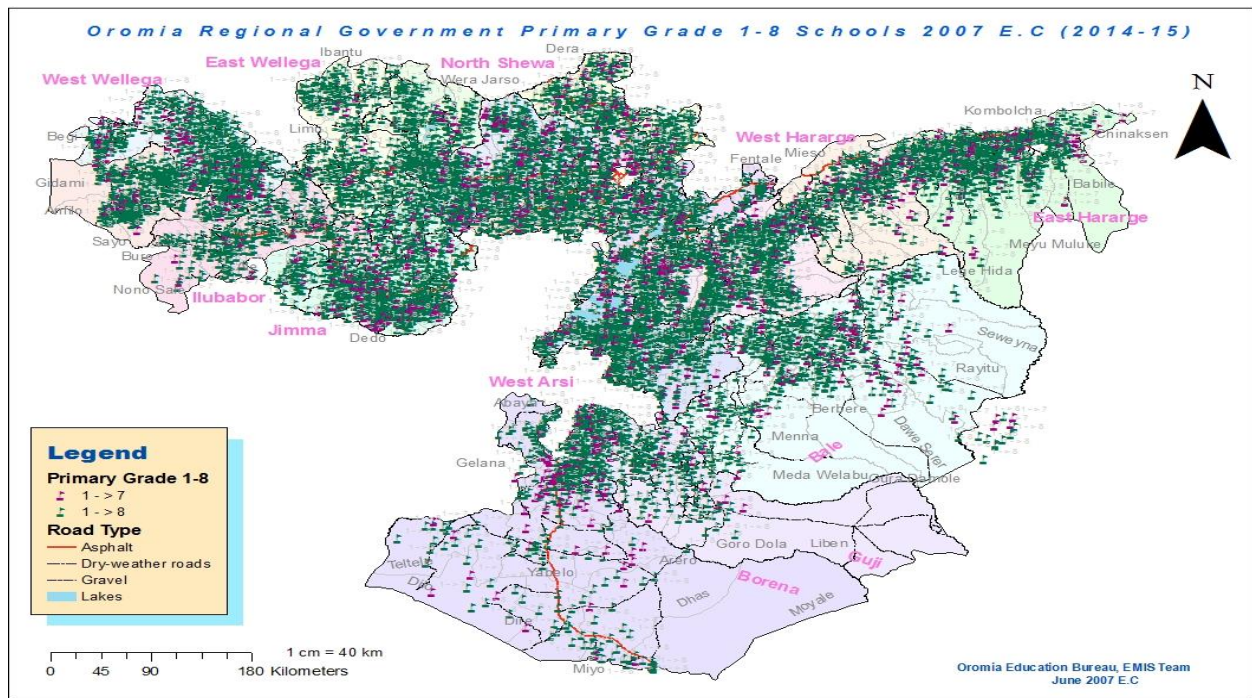

Map 2. Primary Second Cycle Geographical Locations

Map 3. Shows the distribution of primary 2nd cycle schools in the Region. The map is sketched with the scale of 1 cm on the paper to 40 km on the land. As we can see from the map the schools are dense in central and North East & west areas of the region, whereas scattered in similar areas as indicated for primary 1st cycle, The point data on the map shows schools by grade level with different color for (Grade 1-5, Grade 1-6, Grade 4-7, Grade 5-7, Grade 5-8 and Grade 6-8), and the map also shows the accessibility of road to the schools.

2.1.4. Geographical Locations of Primary (Grade 1-8) Schools and ABE Centres

Map 3. Primary schools (Grade 1-8) Geographical Locations

Map 4, shows the distribution of complete primary schools in the Region, it means those schools having grade level (1-8). The map is sketched with the scale of 1 cm on the paper to 40 km on the land. As we can see from the map the schools are highly dense at central, North East and North West areas of the region, whereas scattered in Southern part of the region. The non-schools areas are grazing land or forest.

The map also shows the accessibility of asphalt, gravel and dry weather roads to the schools. As the map indicates, most of pastoral areas are still unreached of primary schools within 3 km buffer zone, so that it needs special attention from concerned bodies.

2.2. Primary Enrolment and Enrolment Rates

2.2.1. Intake Rates

Intake rate is used to indicate the extent of new entrants to the first grade of primary education. It indicates the proportion of children who join the primary education system for the first time in terms of official school age for the first grade. It compares children who come to school for the first time, registered at first grade (grade 1) with children of official school admission age (7

years old children). Under this umbrella Apparent Intake Rate (AIR), Net Intake Rate (NIR), Early Starters and Late Starters are analyzed.

2.2.1.1 Apparent Intake Rate (AIR)

AIR is the percentage of new entrants (irrespective of age) in Grade 1, out of the number of children of the official primary admission age 7, in a given year. Sometimes, it is also called the Gross Intake Rate (GIR). AIR tends to reflect those students, who may have not been enrolled in school at the appropriate age, and often reflects the “backlog” of students who could not enrolled before. A high Apparent Intake Rate indicates a high degree of access to the first grade of primary education. The calculation includes all new entrants to first grade (regardless of age). The Apparent Intake Rate can be more than 100%, due to over- and under-aged children entering primary school for the first time, and this makes inconsistencies in population data. Here is the formula to calculate AIR.

$$\text{AIR} = \frac{\text{Number of New Entrants in first Grade}}{\text{Population at the official school - entrance age}} \times 100$$

GRAPH 2.2. TREND OF AIR IN THE LAST FIVE YEARS

The Annual School Census 2014/15 G.C also captured new entrants all age in Primary schools. The government recognized school going age of 7 years for grade 1, unfortunately children with older than the official age are register and made Apparent Intake Rate more than 100% as we can see from table 2.6 above.

As shown from graph 2.2, AIR of the Region was greater than 100% for the last five years; which was because of over and under age children enrolment. The AIR has been fluctuating from year to year. As the data shows, there are children in the system which have not been enrolled in schools until this year, and often reflects the “backlog” of children who could not enrolled before.

As indicated in table 2.6 above, it is possible to see that, AIR of Oromia in 2007 E.C (2014/15 G.C) is 147.8% (M=155.7% and F=139.6%). The table also shows that almost all zones and administrative towns have AIR greater than 100%. Concerning GPI six zones, (Bale, Borena, Finfine Surrounding Special Zone, Guji, West Harerge &North Shoa), have GPI less than that of the regional average (0.90).

Oromia Total	524,063	509,859	1,033,922	816,128	711,904	1,528,032	512,535	482,153	994,688

From the table 2.7 above, a total sum of 1,528,032 new entrants have joined grade 1, where 816,128 are Male and 711,904 are female. The largest number of new entrants (69.1%) was 7 years which is the official government recognized age of primary school entry. The data shows

that 0.7% of the new entrants were underage whereas 30.2% of the new entrants were overage. (Refer the above table for more information)

2.2.1.2. Net Intake Rate (NIR)

Net Intake Rate shows new entrants in the first grade of education system who are of the official school-entrance age, expressed as a percentage of the population of the same age. The calculation requires new entrants in the first grade of education cycle which are the official school-entrance age and population at the official school-entrance age. The method of calculation is as follows:

$$(NIR) = \frac{\text{New entrants in the first grade of Primary 1st cycle who are of the official school - entrance age}}{\text{Population at the official school - entrance age}} \times 100$$

A high Net Intake Rate for primary education of official primary school-entrance age children indicates a high degree of access to the first grade of primary education.

GRAPH 2.3. TREND OF NIR IN THE LAST FIVE YEARS

Graph 2.3 above, indicates the trend of past five years NIR at regional level. The graph also shows that NIR of Grade 1 by 2009/10 E.C was, 89.8% (M= 87%, F= 84.2%) and then this rate has move up to 96.2% (M=97.8%, F= 94.6%) by 2014/15 AAGR of 2.2 %.

As shown in table 2.8 among all zones & Administrative towns, 11 zones and 5 Administrative towns have NIR greater than or equal to the regional average 96.2%. Fortunately, nine of them are having equal to 100% NIR, on the contrary, there are also zones and administrative towns which have low NIR as compared to the regional average.

2.2.2. Gross Enrolment Rate (GER)

Gross Enrolment Rate is defined as the enrolment in a specific level of education, regardless of age expressed as a percentage of the official school-age population corresponding to the same level of education in a given school year. GER is a crude measure of education coverage. Since it includes under-aged and over-aged pupils, GER can be greater than 100%, and frequently in countries to attempt in addressing the backlog of students attending the school because of different reasons, such as financial need, family issues, or lack of schools.

The data required to calculate GER is, the enrolment in a specific level of education, regardless of age and official school-age population corresponding to the same level of education. The method of calculation is as follows

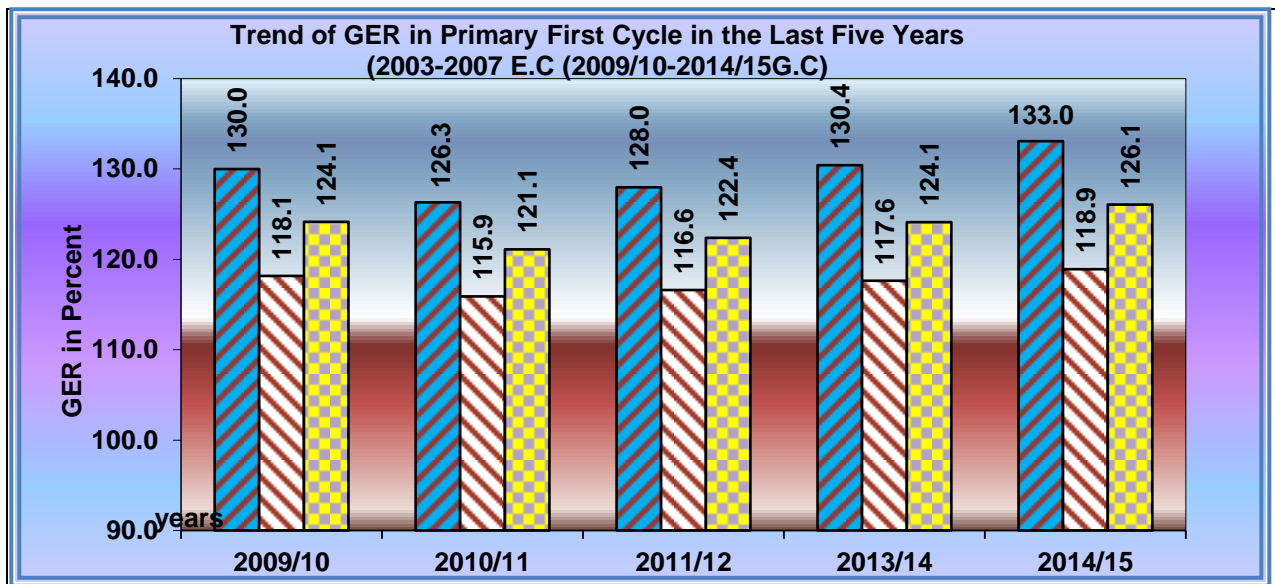

$$(GER) = \frac{\text{Total enrolment in a specific level of education, regardless of age}}{\text{official school - age population corresponding to the same level of education}} \times 100$$

GER does not appear to be a good indicator of school coverage. Although early or late entry is a minor issue (that all children attend school is most important. Consequently, the GER is often considered as an indicator of the system’s physical capacity rather than one of school coverage. A GER of 100 percent would not imply that all children attend school, but that schools have the capacity to educate all children of school age.

2.2.2.1. Gross Enrolment Rate of Primary First Cycle /1-4/

Gross Enrolment Rate of first cycle primary is the rate calculated simply by dividing the number of students enrolled in first cycle primary (irrespective of their age) to the population of 7-10 years old. The Gross Enrolment Rate (GER) in Primary First Cycle /1-4/ schools was 126.1% (130% for boys and 118.9% for girls). This implies existence of overage and underage pupils enrolled in schools.

Graph 2.4. Trend of GER in Primary First Cycle in the Last Five Years

As graph 2.4 above shows, by 2003 E.C (2009/10 G.C) first cycle primary GER of the region was 124.1% (M=130%, F= 118.1.2%) and then it slightly increased to 126.1% (130% for boys and 118.9% for girls) by 2007 E.C (2014/15 G.C), by AAGR of 0.4 %.

We can recognize from table 2.9 below, that the number of over age and under age children in the system has not decreased yet. As the data shows, GER of primary first cycle of five zones and four administrative towns is above the regional average 126.1%. While the rest zones and administrative towns have GER below the regional average.

Concerning to GPI, fourteen zones and all Administrative Towns have greater than or equal to regional average GPI which is 0.89. Among these, thirteen of them have GPI equal to one or greater than one.

The other method in analyzing gender issue is comparing the gender gap of the level. Accordingly, gender gap is expected to be zero, which indicates whether both genders have got equal chance to join school equally or not. Negative gender gap indicates female participation is greater than that of male and positive gender gap indicates male participation is greater than that of female. As illustrated in the table, among all zones and Admin Towns, only six zones and no Admin Towns of the region have gender gap greater than the regional average which is 14.2%.

2.2.2.2. Gross Enrolment Rate of Primary Second Cycle /5-8/

Gross Enrolment Rate of primary second cycle (5-8) is the rate calculated simply by dividing the Total- number of students enrolled in second cycle primary (irrespective of their age) to the total population of 11-14 years old.

GRAPH 2.5. TREND OF PRIMARY SECOND CYCLE (5-8) GER IN THE LAST FIVE YEARS

As shown on graph 2.5 above, the Gross Enrolment Rate of primary second cycle (5-8) shows fluctuation during the last five years. It was 62.3% (M= 66.8%, F= 57.7%), in the year 2003 E.C (2010/11 G.C). After fluctuating up and down finally, it was dropped to 59.2% (M=62.6%, F= 55.8%) by the year 2007 E.C (2014/15 G.C), as the data indicates the issue needs serious attention by concerned bodies.

As Table 2.12 above indicates, the second cycle primary GER of 9 zones and all the 12 administrative towns exceed the regional average of 59.3% (M=62.6%, F= 55.8%). Whereas, the rest nine zones are registered less than the regional average GER.

Regarding to GPI, 11 zones and all administrative towns other than Gelan Town have GPI greater than that of the region average (0.89), On the other hand, three zones and eight administrative towns have GPI greater than or equal to one (1.0).

2.2.2.3. Gross Enrolment Rate /GER/ Primary (1-8)

Gross Enrollment Rate of primary education (1-8) is a crude measure of primary educational coverage, which indicates the percentage of total enrollment in primary schools irrespective of age out of the corresponding primary school age (7-14) population. Apparently, it includes under-aged and over aged pupils. GER can be higher than 100%.

Graph 2.6. Trend Primary 1-8 GER in the last five years

As shown in Graph 2.6 above, the past five years trend of GER for primary education of the region tells us that, it has been fluctuating up and down. Accordingly, GER of the region was 95.4% (M=100.6%, F=90.0%) in 2003 E.C and then by 2007 E.C shown a steady decrement and reached 95% (M=100.3%, F=89.5%). As the data shows, fluctuation was frequent in the middle of the past five years due to many reasons. Apparently, since it is difficult to list those reason here, it is better to conduct basic research to find the possible solution for the problems.

As table 2.14 above illustrates, eight zones and seven administrative towns in the region have GER above the regional average 95% in the year 2007 E.C. On the contrary, the rest zones and administrative towns have below the regional average. Regarding to GPI, six zones and one administrative town have registered GPI less than the regional average which is 0.89, the rest zones and all Administrative towns have above the region average. Among them nine Administrative towns and one zone have GPI greater than or equal to 1.0, which means participation of Female is seems more than or equal to that of Male.

2.2.3. Net Enrolment Rate (NER)

It is the rate of the official age group for a given level of education expressed as a percentage of the corresponding school age population. NER is the best way of measuring organized timely school participation and is a more refined indicator of school and enrolment coverage in terms of explaining the proportion of pupils enrolled from the official age group. NER is usually lower than the GER since it excludes over-aged and under-aged pupils. NER is calculated by dividing the number of properly aged primary students (for Ethiopia ages 7-14) by the number of children of school age (7-14) population.

$$NER = \frac{\text{Total Enrolment in a specific level of Education with official age - group}}{\text{Official school age population corresponding to the some level of Education}} \times 100$$

A high NER denotes a high degree of participation of the official school-age population. The theoretical maximum value of NER is 100%. Increasing trends can be considered as reflecting improvement in participation of official school age population at the specified level of education. When NER compared with GER, the difference between the two ratios highlights the incidence of under-aged and over-aged enrolment. If the NER is below 100% then the difference with 100% provides a measure of the proportion of children not enrolled at the specified level of education. However, some of these children could be enrolled at other levels of education.

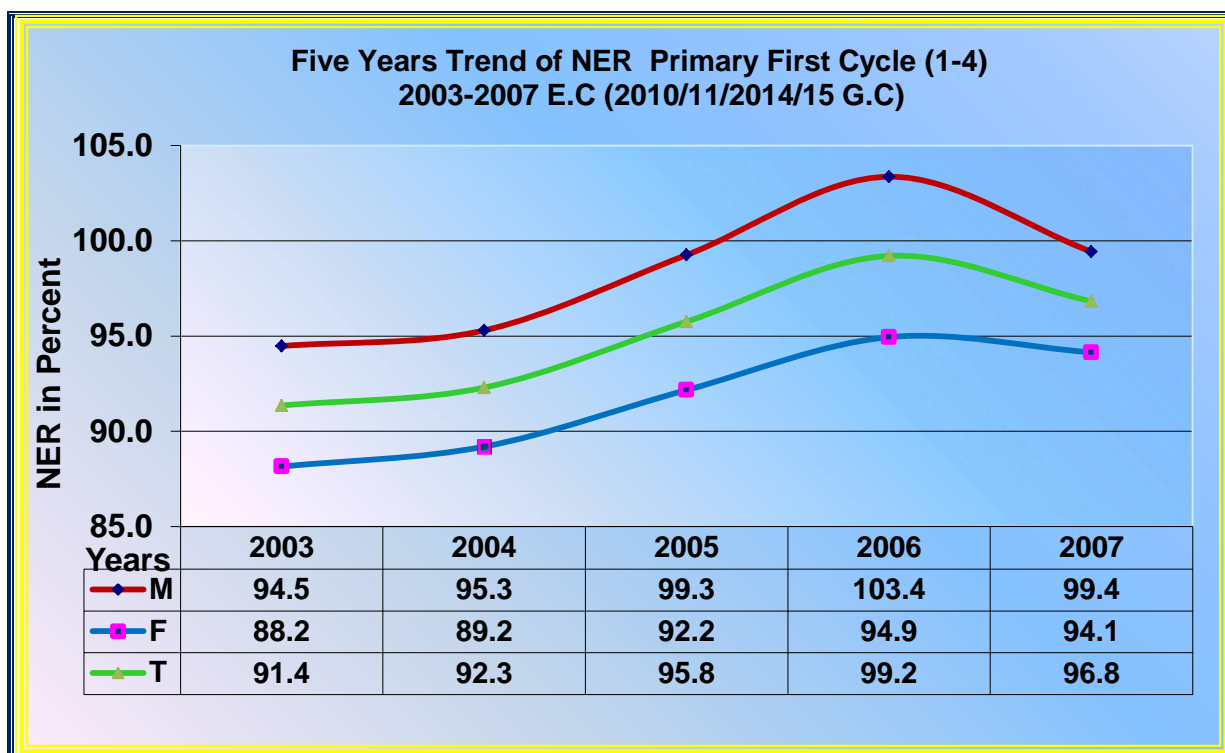

The NER is measure of school coverage for theoretical age groups, but is unfortunately not well to adapt in measuring overall coverage. Its main drawback is to exclude late entrants, early starters and repeaters. Furthermore, the NER is severely affected by the inaccuracy of single-age data. Children’s reported ages as per school censuses are often wrong due to children’s or their

teachers' ignorance, particularly when the registration of births is not widespread, or due to amendments to the birth register.

2.2.3.1 Net Enrolment Rate (NER) in Primary First Cycle (1-4)

It is the percentage of students who enrolled in primary first cycle, whose age is 7-10, compared to the school age population of this level; that is total population of 7-10 years old.

Graph 2.7. Five Years Trend of Primary First Cycle NER

Graph 2.7 above shows, the trend of last five years NER of fist cycle primary at regional level. Accordingly, the NER of primary in first cycle was 91.4%(M=94.5%, F=88.2%) in 2003 E.C and the rate was up and down for the last 5 years, and finally it reaches to 96.8% (M=99.4%, F=94.1%) by 2007 E.C with AAGR of 1.45%.

Table 2.16 above demonstrates that, 10 zones and 4 Administrative towns have greater than the regional average NER of first cycle primary 96.8% (M=99.4%, F=94.1%). Amongst 5 zones and 3 Administrative towns have NER of 100%. Regarding to the gender disparity, only seven zones have less than the regional average GPI (0.95). The rest 11 zones and all Administrative towns have greater or equal to the regional average, among them eleven administrative towns and six zones have registered GPI greater than or equal to one

2.2.3.2. Net Enrolment Rate (NER) in Primary Second Cycle (5-8)

NER at primary second cycle is the proportion of enrolment of students in second cycle primary of the age (11-14), with eligible school population of age (11-14).

Graph 2.8: Five Years Trend of Primary 5-8 NER

As graph 2.8 indicates, the trend of the NER of primary second cycle school in the region. It has shown a little bit progress over five years period. Accordingly, in 2003 E.C it was 43.9% (M=45.3%, F=42.4%) and then by showing a bit increment it rose to 46.8% (M=48.4, F=45.2%) by 2007 E.C, with the average annual growth rate of 1.61%. As the growth rate indicates, NER of the level shows insufficient increment so that, it is recommended that a serious attention has to be given by concerned bodies for the issue to resolve.

As can be seen from table 2.18 above; eight zones and eleven administrative towns have registered NER of second cycle primary above the regional average, 46.8% (M=48.4, F=45.2%). But ten zones and one Administrative Town have registered NER less than the regional average. Out of all zones and Administrative towns in the region 13 zones and 11 Administrative towns exceeds the regional GPI (0.93). This table also tells us that six zones of the region have Rural/Urban parity Index/, RUPI greater than the region average (0.5).

2.2.3.3. Net Enrolment Rate (NER) in Complete Primary (1-8)

The Net Enrolment Rate (NER) for complete primary can also be calculated in a similar way of calculating NER for first cycle and second cycle primary. It is the proportion of the appropriate school age (7-14) children enrolled in primary school with the total school age (7-14) population. When the first and second cycle NER separately compared with complete primary in the region, it would take more time to achieve 100%. This is because those children in first cycle primary of age 11-14 who are over aged for first cycle, and students of age 7-10 who are under aged for the second cycle are included while calculating NER for complete primary. As illustrated on the graph 2.9 below; in between the years 2003 E.C to 2007 E.C, NER of complete primary school shows steady decrement from 88.7% (M=85.3%, F=81.3%) in 2003 E.C to 86.8% (M=90.7%, F=82.7%) in 2007 E.C. which shows that the issue needs our attention to keep the progress ahead.

Graph 2.9. Five Years Trend of Primary 1-8 NER

As illustrated from Table 2.20 among all zones of the region, NER of nine zones' and five Administrative towns exceeds the regional average of primary education 86.8% (M=90.7%, F=82.7%). whereas, nine zones and seven administrative towns have below the average. Furthermore, among all of zones and Administrative towns only five zones and one Administrative Towns were registered below the regional average GPI (0.91). The remaining is above the regional average; amongst three zones and eleven administrative towns have registered greater than or equal to 1.00. Regarding to RUPI, from 18 zones of the region, 16 zones have PI greater than the regional RUPI which is 0.7

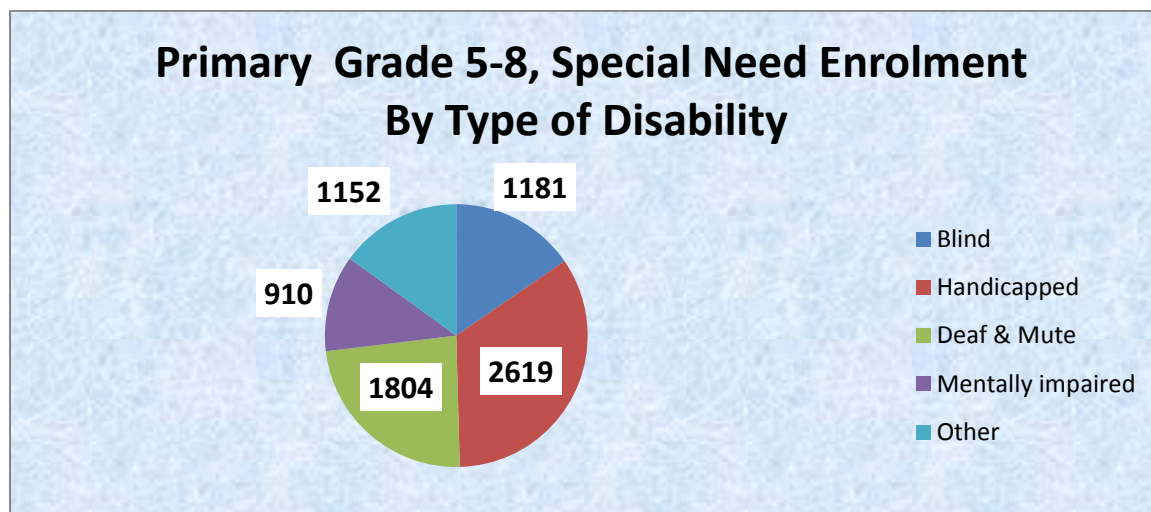

2.2.3. Enrolment of Children with Special Needs

Graphs 2.10, 2.11 & 2.12, illustrate enrolment with Special Needs by type of disability in primary first cycle, second cycle. In 2007 E.C (2014/15 G.C) 28,451 (Male 16980, Female 11,471) Special Needs students have registered at regional level. Amongst, 3425 Blind, 7731 Handicapped, 7909 Deaf and Mute, 4727 mentally impaired and 4659 are other disabilities. This data indicates that, there are a lot of children with Special Needs who are currently not attending schools throughout the region as comparing to 10% of school age population of their level. The existence of such large number of students with special needs in the region requires designing and implementing the already existing inclusive policy and strategy in order to provide them the support of teachers training, physical infrastructure, provision of learning equipment and preparing special schools where it is needed. Therefore, the issue needs our attention to make them getting opportunity to learn in an inclusive environment and keeping their right to learn. Table 2.21 below also shows Special Needs enrolment by Zone as well as Administrative towns by type of disability.

Comparison of Primary Education Special Need Enrolment by Zone

As shown in graph 2.13 and table 2.22 below, a regional analysis on children with special needs in primary schools shows that Bale, West Shoa and East Hararge zones have the largest share of SNE pupils which is 30 %. While Finfinne Surrounding Special Zone, South West Shoa and Borena zones have the lowest share which is 7.3% from the share of zones. Concerning to Administration Towns; Sebeta, Nekemte and Shashemene Administrative Towns have the largest share of SNE pupils with 56.4 % from the share of towns, where as Lege Tafo, Sululta and Dukem Towns have the lowest share which is 2.1%.

2.2.3. Orphans in Primary Schools

2.2.3.1. Proportion of Orphans in the Region

The total number of orphans in the primary subsector was determined and expressed as a proportion to the total enrolment as indicated in table 2.23 below. Findings from the table indicate 60,135 (32,270 boys and 27,865 girls) have lost either of their parent or both that share 0.88% of the entire pupil enrolment in primary schools, with the proportion of boys 0.88% and Girls 0.87%. A regional analysis indicated that Gelan, Asela and Sebeta towns had the highest proportion of orphans at 5.87%, 2.82% and 2.78% respectively, compared to all other Zones, where as Jima Zone, lege Tafo Town and East Hararge zone had the lowest proportion of orphan pupils rating at 0.21%, 0.39% and 0.51% respectively.

2.2.6. Primary Enrolment

2.2.6.1. New Entrants in primary Education

I. New Entrants by Age

The Annual School Census 2007 E.C also captured new entrants in Primary schools by age. The government recognized school going age of 7 years and it’s upon this that the findings in the figure below are summarized.

Graph 2.24. New Entrant Enrolment by Age

From graph 2.14 above, it is possible to observe that total of 1,528,032 new entrants (816,128 Males and 711,904 Females) have been registered at regional level. This figure represents a proportion of 22.3% (22.4% Males and 22.3% Females) the total primary enrolment. When compared by age, the biggest number of new entrants (69.1%) was 7 years which is the official government recognized age of primary school entry. Results show that 0.7% of the entrants were underage whereas 30.2% of the new entrants were overage.

II. New Entrants by Region

As the table 2.25 below indicates, zones in the region have brought the highest percentage of new entrants to primary that is (97.3%) when compared with Administration towns having lowest percentage (2.7%). This indicates that there was a continuous sensitization of the communities in zones about the importance of sending children to schools. The number of boys entering primary schools surpassed the number of girls by gender gap of 6.8%.

2.2.6.2. Grade1-8 Enrolment

I. Primary Enrolment by Grade, Ownership and Gender

Enrolment was captured by Grade, ownership and gender to establish their percentage distribution for better planning and allocation of school facilities as well as soliciting for support from various stakeholders. Findings are indicated in tables below indicates.

A total regular enrolment of 6,841,930 (Male 3,651,536 and Female 3,190,394) pupils was registered in 2007E.C (2014/15) with 96.8% (97.0% Male and 96.8% Female) belonging to government schools, whereas, 3.2% (3.3% Male and 3.2% Female) belonged to Non-Government schools. Considering pupil enrolment distribution by grade, higher enrolment figures were registered in lower classes and gradually decreases as the grade goes up. In general the percentage distribution of pupils by class was 24.9% for G.1, 18.4% for G.2, 14.7% for G.3, 12.4% for G.4, 10.1% for G.5, 7.7% for G.6 and 6.6% for G.7 and 5.3 for G8.

Graph 2.15. Percentage of Distribution of Primary Education Enrolment by Grade

Results from graph 2.15 above shows that there is a high dropout rate and repetition rate when we move from Grade one to Grade eight in the system.

II. Primary Enrolment by Zones

Enrolment was categorized according to Zones to establish which zones have the highest and/or lowest enrolment figures. These figures are used for planning and allocation of resources by the government, the figure below summarizes the findings. As figure clearly indicates Zones in the Region had highest percentage share of enrolment in all primary schools which is 97.5% whereas Administration towns had the least share of only 2.5%.

2.2.6.3 Primary Gender Equity in the Last Five Years

I. What is Equity?

The notion of equity is to be distinguished from that of equality with which it is sometimes confused, however close they may be. Equality is based on a mathematical premise, the relative evenness in the distribution of resources, and is close to the notion of equal treatment. Equity on the other hand refers to a concept of social justice and thus is more assimilated to the notion of equal chances.

Education is considered to be one of the best channels to reduce socio economic inequalities, and especially, a powerful tool to reduce their trans-generational transmission. The level of qualifications and degrees obtained through out schooling determine an individual's future socio economic status to a certain extent. Education systems are therefore expected to offer each child similar chances of success, based on merit over and above personal characteristics beyond their control (gender, area of residence, and so on). Given that schooling options are likely to be affected by individuals' financing ability and other specific characteristics, it is important to determine the extent to which education systems, especially those that are publicly funded, take these factors into account to limit their impact on individuals' access to school and results.

II. The Absolute Gap in Performance between Two Groups

The absolute gap in the performance of two groups A and B (such as urban and rural indicators and boys and girls) is calculated by subtracting the chosen performance indicator for group A from that for group B. The absolute gap is interpreted as the amount by which it is necessary to increase the performance indicator for group B (girls in this instance) to achieve equity between the two groups.

III. The Parity Index

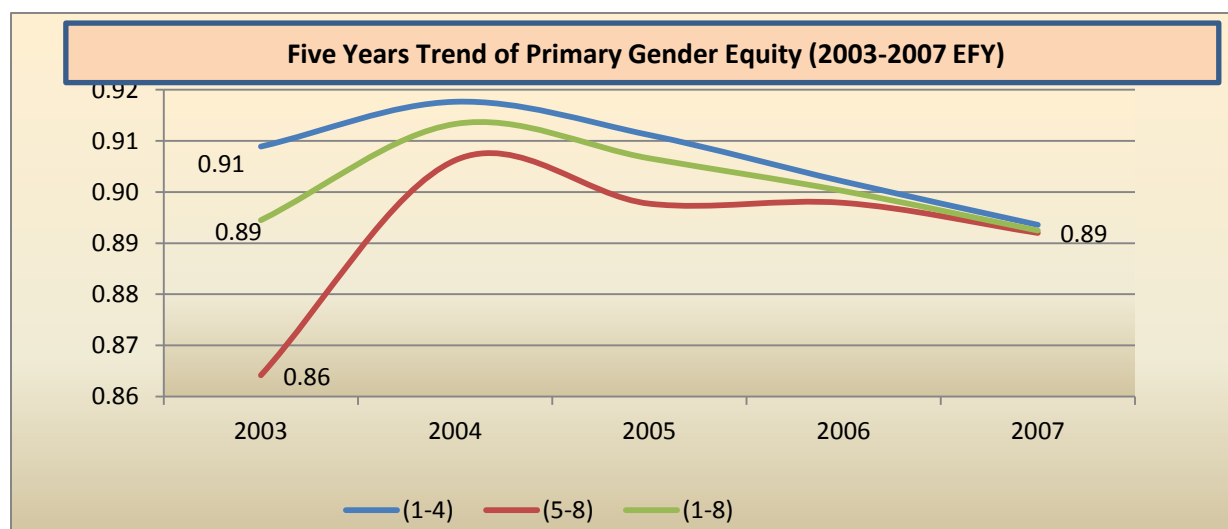

The parity index comparing groups A and B is obtained by dividing the performance indicator of group A by that of group B. The parity index provides the factor by which it would be necessary to multiply the group B indicator (or divide the group A indicator) to achieve an equal value for

both groups. Parity between the two groups is achieved when the parity index is equal to 1. An index value above 1 indicates an advantage for group A (numerator); conversely, an index value below 1 indicates a disadvantage for group A, The greater the divergence of the index from the value of 1, the greater the disparity between the two groups.

Table 2.36. Five Years Trend of Primary Gender Equity by GER

Five Years Trend of Primary Gender Equity												
Year	GER Primary (1-4)				GER Primary (5-8)				GER Primary (1-8)			
	M	F	GPI	Gender Gap	M	F	GPI	Gender Gap	M	F	GPI	Gender Gap
2003	130.0	118.1	0.91	11.8	66.8	57.7	0.86	9.1	100.6	90.0	0.89	10.6

Graph 2.17. Five Years Trend of Primary Gender Equity by GER

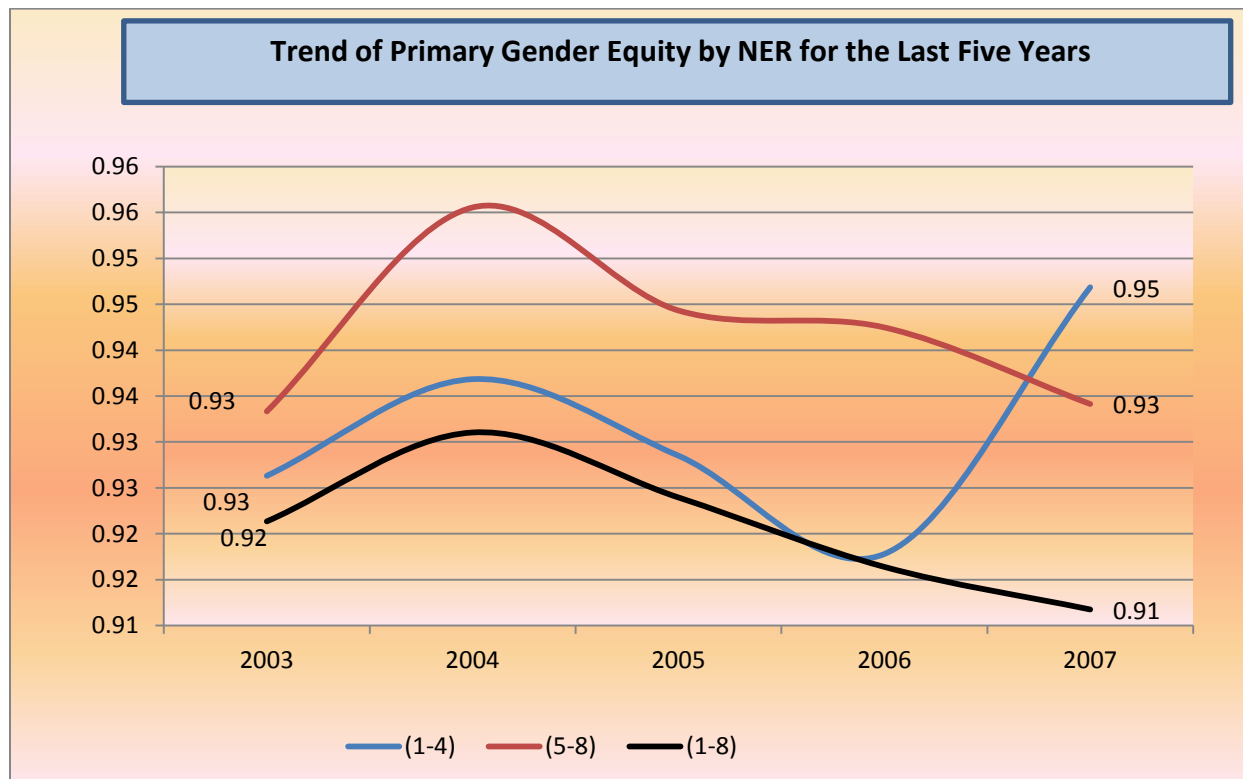

As noted on table 2.36 and graph 2.17 above, the primary gender equity of the last five years by GER has been fluctuated up and down. For example, it has been 10.6% and 0.89 Gender Gap and GPI respectively in 2003 E.C (2010/11 G.C) and then shows almost steady value as 10.8% and 0.89 Gender Gap and GPI respectively in 2007 (2014/15).

Table 2.37. Five Years Trend of Primary Gender Equity by NER

Trend of Primary Gender Equity by NER for the Last Five Years												
Year	NER Primary (1-4)				NER Primary (5-8)				NER Primary (1-8)			
	M	F	GPI	Gender Gap	M	F	GPI	Gender Gap	M	F	GPI	Gender Gap
2003	95	88	0.93	7.0	45	42	0.93	3.0	89	82	0.92	7.0
2004	95	89	0.94	6.0	45	43	0.96	2.0	87	81	0.93	6.0
2005	99.3	92.2	0.93	7.1	44.9	42.4	0.94	2.5	88.1	81.4	0.92	6.7
2006	103.4	94.9	0.92	8.5	45.2	42.6	0.94	2.6	89.7	82.2	0.92	7.5
2007	99.43	94.1	0.95	5.3	48.4	45.2	0.93	3.2	90.7	82.7	0.91	8.0

Graph 2.18. Five Years Trend of Primary Gender Equity by NER

As can be seen from table 2.37 and graph 2.18 above, gender equity of primary (1-8) by NER has been 7.0% and 0.92 Gender Gap and GPI respectively in 2003 (2010/11) and shows insignificant increments to 8.0% and 0.91 Gender Gap and GPI respectively in 2007 (2014/15).

2.2. Out of School Children

The analysis of out-of-school children takes on a special dimension today, in a context marked by the progress in enrolment, but where still significant share of children do not have access to basic education. Achieving universal primary education will require analyzing this issue to better understand its magnitude and characteristics, and formulate appropriate corrective education policies.

2.2.1. Estimation of the Share and Total Number of Out of School Children

A first approach to the estimation of out-of-school children is to represent school-aged children's attendance status at the time of the survey (the group aged 4 to 18 years for pre-primary, primary and secondary education). For each age, one will distinguish between the shares of children who: (i) never attended school; (ii) are attending a given cycle (from preschool to secondary education); and (iii) have dropped out of school.

Definitions of out-of-school vary based on the context we are using. That used here is inspired by the definition offered by UNICEF/UIS: An out-of-school child is any child of compulsory school age, generally of primary or basic education school age, who is not attending a formal primary or basic school. This definition can be limited to cover only primary, lower secondary or upper secondary school aged children. Thus, primary school-aged children attending pre-school are considered as out-of-school, as well as children attending informal schools (as per the UNICEF/UIS definition). On the other hand, primary school-aged children attending secondary are not considered as out of school. This approach tends to overestimate out of school.

Various methods have been developed to estimate the number of out of school children (See World Bank, 2011 and UNICEF/UIS, 2010). Although approaches to the computation differ, they all agree on in the need to distinguish among different types of un-enrolled children. It is common to differentiate between those who have never attended, and those who have dropped out. Further detail can be provided by: (i) differentiating between those who will never attend school from those who may attend later; and (ii) those at risk of dropout from those who are not. Although this category is not computed as out of school, it provides a quantitative estimation of the weight of school dropout. Identifying children at risk of dropout is also helpful to establish appropriate preventive policies.

As table 2.38 above shows, there are about 974,473 (345,730 male and 628,743 female) children of age 7 to 14 were out of school by 2007 EFY in our Region. These children are once in the past may attended the school and they were dropped from the school for some reasons or may be children they never attend schooling before. The data shows that still there are out of school children that make the region to not achieving UPE as planned.

2.4. Quality of Primary Education

Quality of education is the key indicator to detect whether a given country is on the right track to achieve the intended goal of its education system. Quality of education system may refer to many

different characteristics, such as quality of inputs into education system, process, quality of educational outputs and outcomes. Here in this publication we focus on quality, in relation to educational inputs such as teacher's quality and class size in our education system. Some indicators of quality depend on the total number of students enrolled.

2.4.1. Teachers in Primary Education

I. Qualification of Teachers in Primary Education

One of the main factors, which affect the quality of education, is the qualifications of the teacher. That is, whether the educational qualifications of the teacher meet the requirements of the level he/she is teaching. According to national standards, primary education requires teachers with minimum qualification of Diploma from College of Teachers Education.

As illustrated from table 2.39 above, percentage of qualified primary/1-8/ teachers in 2007 E.C, is 76.3% (M=74.4% F=79.1%) at regional level. Teacher's qualification for primary first and second cycle is also indicated on the table. It also reveals that the percentage of qualified teachers for primary first cycle schools at regional level is 64.6% (M=56.6% & F=73.3%), Where as in primary second cycle schools the percentage of qualified teachers is 91.9% (M=91.8%& F=91.8%) Consequently, the data indicates that the qualification of teachers is another area which needs special attention from concerned bodies particularly for primary first cycle. The performance of pupils in primary schools is greatly affected by the quality of the teaching force. The Annual School Census 2007 captured the total number of teachers in the primary subsector by zone and gender. A total of 128,934 (73,748 Male and 55,186 Female) teachers were registered in all primary schools, with male teachers comprising a higher percentage of 57.2%.

A percentage distribution of teachers across zones and Administrative towns indicates that the zones had the highest percentage share of primary teachers with over 94.3%, while the Administrative towns with the least number of schools had the smallest percentage share of teachers 5.7%. Regarding to ownership out of 128,934 teachers 120,883 (93.8%) teachers were in government schools while 8,051 (6.2%) teachers were in Non- Government schools by the year 2007 E.C.

II. Primary Science and Mathematics Teachers

From the data 2007 E.C Science and Mathematics primary teachers also identified by Government and Non-Government Schools, Table 2.41 below indicates that 43,147 (95.3%) (28,486 Male and 14,662 Female) SMASEE teachers were in government schools while 2147 (4.7%) teachers were in Non- Government schools. Among all 128,934 primary School teachers of the region, SMASEE teachers have a share of 45,294 (35.1%). These indicate more than 1/3rd of our teachers are involved with science and mathematics, which shows our recruitment of teachers are on the right track that realizes the intention of country towards science and technology.

Regarding to gender participation of 45,294 SMASEE teachers 30,016 (66.3%) were Male and 15,278 (33.7%) were Female. Specifying SMASEE primary education teachers by their specialization, among 45,294 teachers 12,470 (27.5%) are graduates of Mathematics, 4,883 (10.8%) in Physics, 5,599 (12.4%) in Chemistry, 7,342 (16.2%) in Biology, 13,228 (29.2) in Natural Science and 1,772 (3.9%) in Integrated Mathematics and Basic Science according to their specialization.

2.4.2. Education Quality Indicators

2.4.2.1. Pupil Teacher Ratio and Pupil Section Ratio

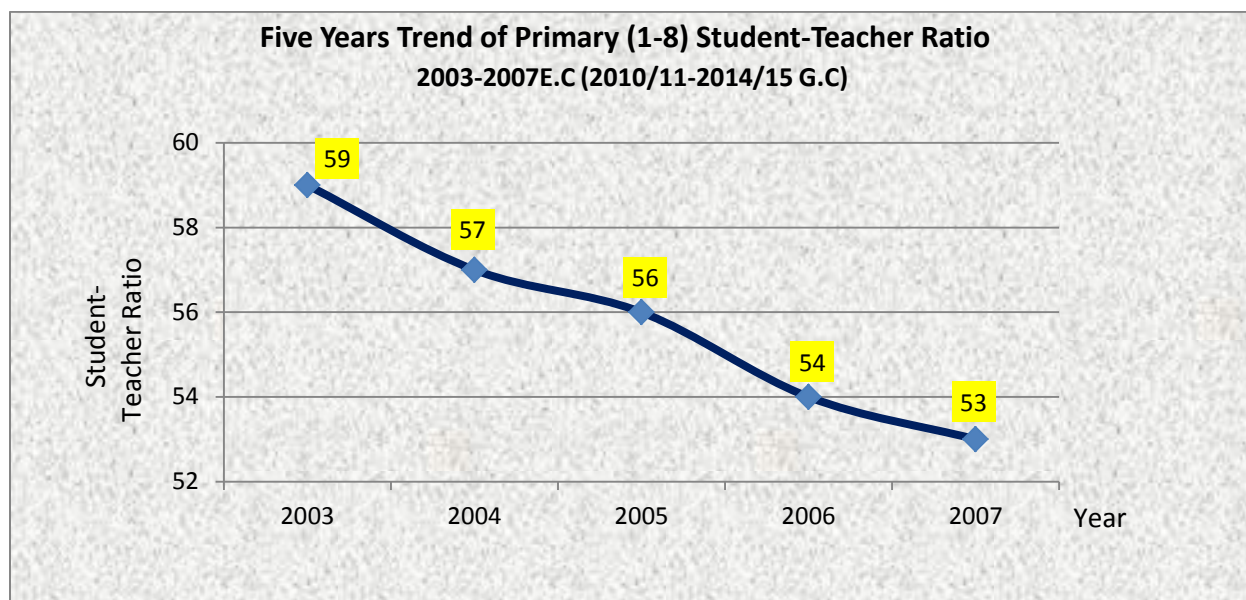

This is one of the most common indicators of quality education used in educational planning. It is believed that a lower number of pupils per teacher and Section indicate that pupils will have better chance of contact with their teachers with in manageable class room. The standard set for pupil teacher ratio for primary education is 50:1. Findings from 2007 EFY school census reveal that the overall PTR of the year is 53 as indicated in table 2.44 below:

The findings also indicated, Hararge East, Hararge West and Jima zones with the highest PTR registered at 73, 69, and 67 respectively in 2014/15 G.C. This might be due to low attraction and retention of teachers in the area as compared with the Administrative Towns such as Sebeta, Burayu and Gelan with the lowest Ratio of 30, 28 and 23 respectively, where attraction and retention is high. This can be lessened by increasing incentive schemes for teacher like; constructing more teachers' houses and improving the social infrastructure in those Zones with higher Student to Teacher Ratios is recommendable. As shown from Graph 2.19 below, the PTR trend over five years shows that it has been improving at a rate of 6%.

Concerning the Pupil section ratio (PSR) it is one of the educational quality indicators that indicate average number of pupils per class. It gives a rough estimation of class size, assesses the efficiency of resource utilization and it also used to assess the teaching- learning process. The national standard of PSR is 50:1 for primary education.

As it is indicated on graph below, the trend of last five years shows that PSR in primary school has improved from 61:1 in 2003 EFY to 57:1in 2007 EFY. Furthermore, PSR of 2007 EFY at regional and zonal level were illustrated on the table 2.44 below.

2.7. Primary Schools Finance

Founding bodies of schools in Oromia Region include; Government, Private, faith based and other organizations. In year 2007 EFY (2014/15), Government owned primary schools have the biggest share of 93.5% followed by private founded schools (4.63%). Faith based and others owned schools have a share of only 1.92%.

The Government funding procedure is passed through two steps process. The first involves fiscal transfers from the federal government to the regions and the second from regional governments to *woredas*. Accordingly, Woredas allocate the block grant for primary and secondary general education and the regional education Bureau for preparatory schools, based on the enrollment they had. Additionally the GEQIP school grant also allocated accordingly based on the number of students

However, all levels of schools independently generate additional budget from different source, for example by generating their internal income, community participation and NGO donation. Tables 2.52 and 2.53 below illustrate the overall revenue of Government and none Government primary schools. It demonstrates the financial information of the year, which was collected from the annual school census questionnaire. The tables indicate revenue of the region by zonal level. Table 2.54 and 2.55 also show the government and none Government primary schools annual expenditure by zone.

2.8 Efficiency of Primary Education

Education system is said to be efficient if maximum output is obtained from a given input or if a given output is obtained with minimum possible input. The problems of measuring efficiency in education however are considerable. There are several indicators used to measure the efficiency of the education system.

2.8.1. Indicators of Internal efficiency with Different Profiling Methods

The Internal Efficiency Rate (IER) is the ratio of number of student’s years that should be, ideally spent to carry out a certain number of students at the end of primary cycle out of the number of students-years effectively spent.

$$\text{IER} = \frac{\text{Student's years that should be ideally spent}}{\text{Number of student's years effectively spent}}$$

Internal Efficiency Rate (IER) is calculated with different methods such as Transverse, Longitudinal and Pseudo-Longitudinal Methods,

a. Formulas for Calculating IER by Longitudinal Method

$$\text{IER} = \frac{(\text{Survival Rate (Longitudinal Method) for the final grade}) * (\text{Duration (in years) of the education level})}{\text{SUM of Survival Rates (Survivors) From the first to the final grade of the same education level}}$$

Table 2.56. Primary education Internal Efficiency Rate (IER)

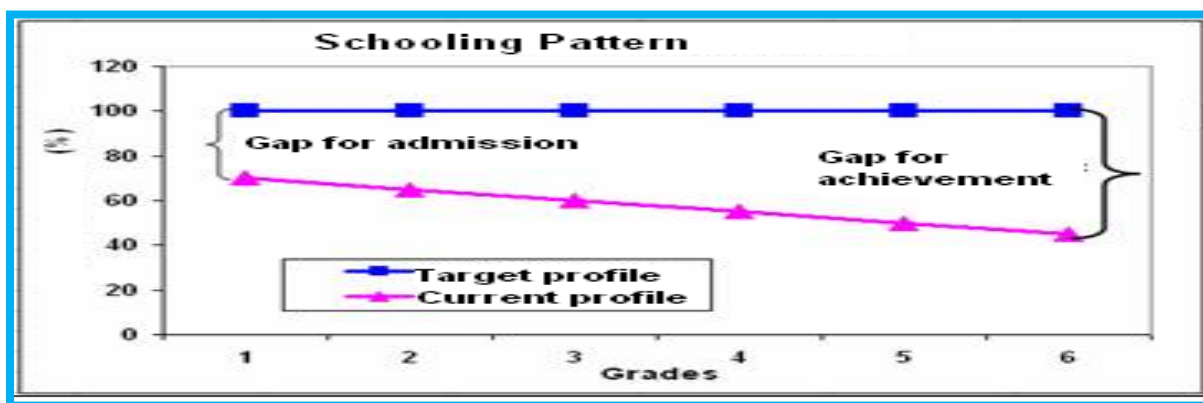

Internal Efficiency Rate (IER) with Longitudinal Method in 2007 E.C (2014/15)									
Grades	G1	G2	G3	G4	G5	G6	G7	G8	
Survival Rates/Retention Rates	100	84.1	53.6	60.6	49.2	39.6	34.6	30.5	
Efficient Students-years	244								
Effective Students-years	452								
IER	0.54								
1-IER (wasted Resource)	0.46								

2.9.2 Interpretation of the Internal Efficiency Rate

Internal Efficiency Rate is a number between 0 and 1. The more this ratio is close to 1, the more the system is efficient. It is complementary to 1 (1-IER) is interpreted as the percentage of resources wasted, because these resources have been used to finance dropouts and repeaters.

2.9.2.1 Schooling Profile /Enrolment Pattern/

The schooling profile is, constituted of Age-Specific Enrolment Ratio for a given cycle of the education system.

The schooling pattern interpreted as the student flow through the education cycle. Its trend determines the efficiency of the system to keep students in the system until they complete their schooling.

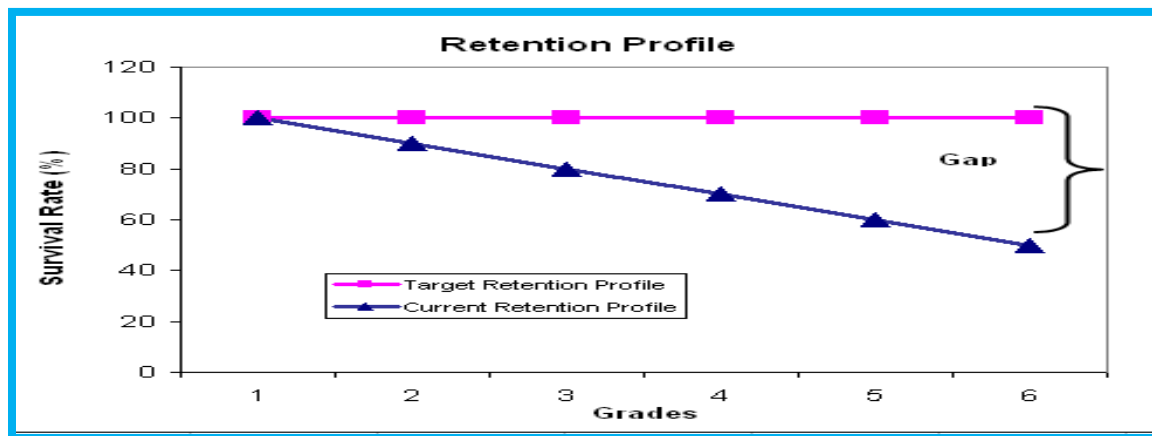

The value of the schooling profile resides mainly in its ability, as per Figure above, to visually indicate the level of enrolment for each grade and to easily distinguish between access and retention issues. It especially distinguishes between the two main factors of weak cycle completion: weak first grade access and high dropout during the cycle. The figure graphically illustrates the most common situations. Thus, a flat schooling profile constitutes retention ideal for the system (no dropout). Conversely, a slanted profile reflects the scale of dropout throughout the cycle and indicates low internal efficiency.

2.9.2.2. Retention Profile

The retention profile is, constituted by the series of survival rate at each grade level. It measures the capacity of the system to keep students in the system until they complete their schooling.

Data required to determine retention profile are Enrolment and News entrants by grade at least for two years

Graph Retention Profile

2.9.2.3. Survival Rate (SR)

A survival rate approaching 100% indicates a high level of retention and low incidence of dropout. Survival rates may vary from grade to grade, giving an indication of grades with relatively more or less dropouts. The distinction between survival rates with and without repetition is necessary to compare the extent of wastage due to dropout and repetition.

2.9.2.4 Schooling Profiles and Retention Profiles by Longitudinal method

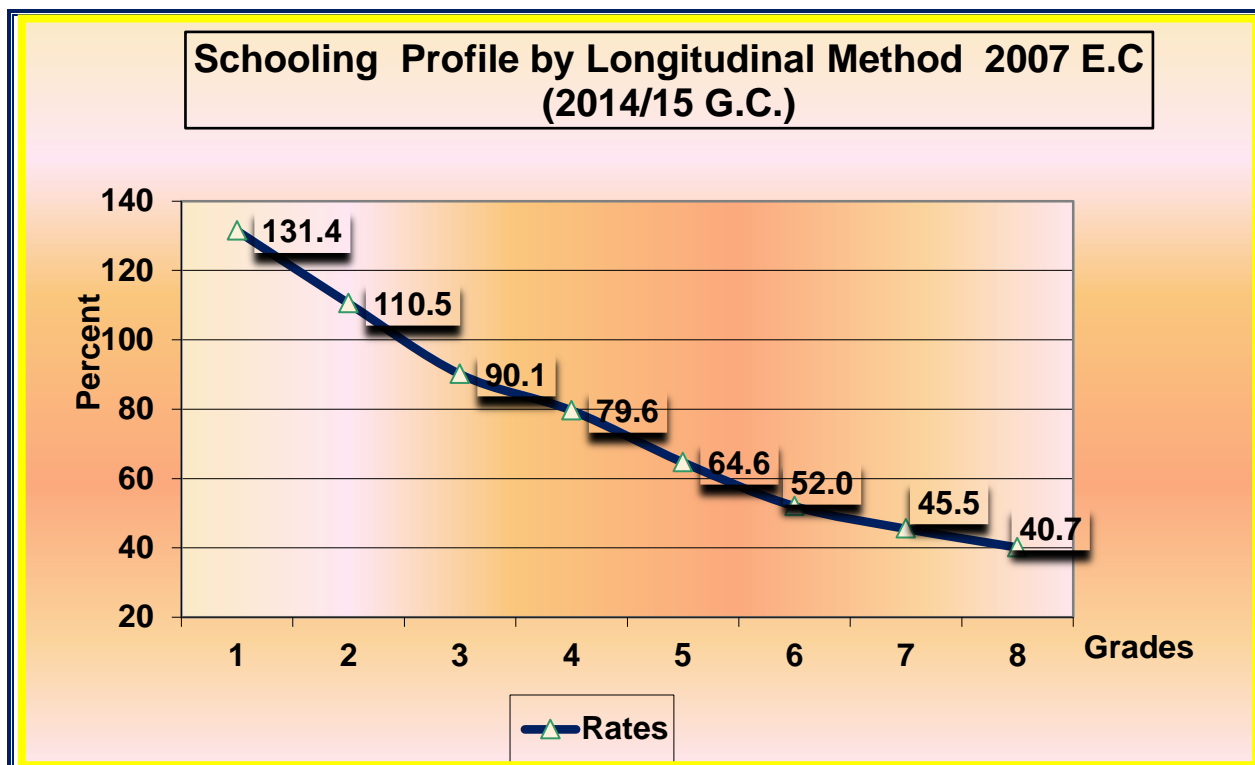

Schooling profiles present the advantage of providing more detailed information on enrolment than the simple average offered by the GER. It gives a visual representation of schooling careers, from cycle access to completion. It also enables the analysis of retention, providing a more precise enrolment diagnosis. There are three main approaches to building schooling profiles; however in this section we will be reviewed only the longitudinal method. These methods rely on different basic information offer a specific interpretation and complementary. The Longitudinal Profile follows one cohort of students through the cycle, and describes their progression through the successive grades of the cycle.

Data required for Longitudinal Method are, new entrants by grade for consecutive years of the total duration of education level. For instance, in Ethiopia, we need data for 8 consecutive years and population at the official school entrance age 8 years ago to implement this method.

2.9.3 Internal Efficiency and Flow Rate

The quantitative goals of education systems are not limited to increasing the number of children enrolled but also to ensure that children who begin a cycle complete it (do not dropout), and do so in the set number of years (do not repeat). Indeed, the pedagogical programs of each cycle are developed in such a way as to progressively provide learners with a coherent and self-reinforcing set of knowledge and skills. The early abandon of a cycle is thus likely to result in the partial or total loss of the knowledge and skills acquired in the years effectively attended. The most widely mentioned example is that of sustainable literacy, acquired during primary education. Indeed, even if many children know how to read and write before the end of the cycle, it has been empirically demonstrated that a significant share of students who did not complete the primary cycle lose their literacy after a number of years if they are not practicing.

Analyzing the flow of pupils through a cycle and evaluating internal efficiency consists of comparing the number of children that access the first grade of the cycle with the number that reach the last grade in the set number of years (without repetition).

Promotion, Repetition and Dropout rates are the paths of student flow from grade to grade and characterize the efficiency of the education system in generating graduates. These rates are used for evaluating, monitoring and projecting the efficiency of students flow in our education systems. In this publication the primary education system of Oromia can be evaluated in terms of internal efficiency indicators.

2.9.3.1. Primary Education Promotion Rate (PR)

Promotion Rate is the proportion of pupils enrolled in a given grades that reach the next grade in the following year. The data required in this calculation is new entrants in grade **j** for year **T** and enrolment in grade **j-1** for year **T-1**. It is also interpreted as a high level of promotion rate indicates a high level of retention or survival rate.

$$PR = \frac{\text{New entrants in grade } j \text{ for year } T}{\text{Enrolment in grade } j-1 \text{ for year } T-1} \times 100$$

Graph 2.22. Primary Education Promotion Rate

2.9.3.2. Primary Education Repetition Rate (RR)

Repetition can be measured through two indicators that are close yet different: the repetition rate and the share of repeaters.

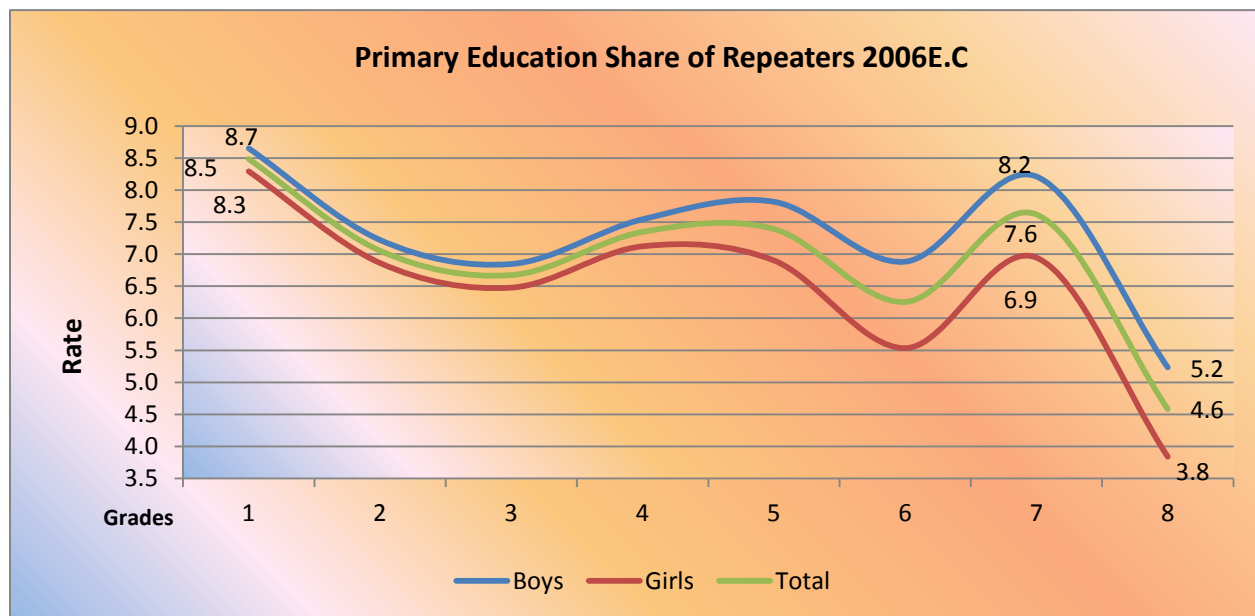

I. Share of Repeaters

Generally, share of repeaters and repetition rate are fairly close indicators, in situations where enrolment increases significantly, the share of repeaters may be slightly lower than the repetition. The repetition rate is a measure that is more aligned with pedagogical practice; it measures the number of pupils that are refused promotion to the following grade. The share of repeaters presents the advantage of only requiring one year of data for its computation, and is therefore more immediate. The Share of Repeaters is the percentage of repeaters in a grade or cycle:

$$\text{Share of Repeaters} = \frac{\text{Number of Repeaters}}{\text{Total Enrolment}}$$

As it shows from the graph 2.23, the RR of grade 1 of the year were 8.6% while the share of repeaters of grade 1 was a little bit less with the rate of 8.5%. Furthermore, grade 8th RR, 5.1% is also a slight greater than the share of repeaters with the rate of 4.6% as well.

Graph 2.23. Primary Education Share of Repeaters

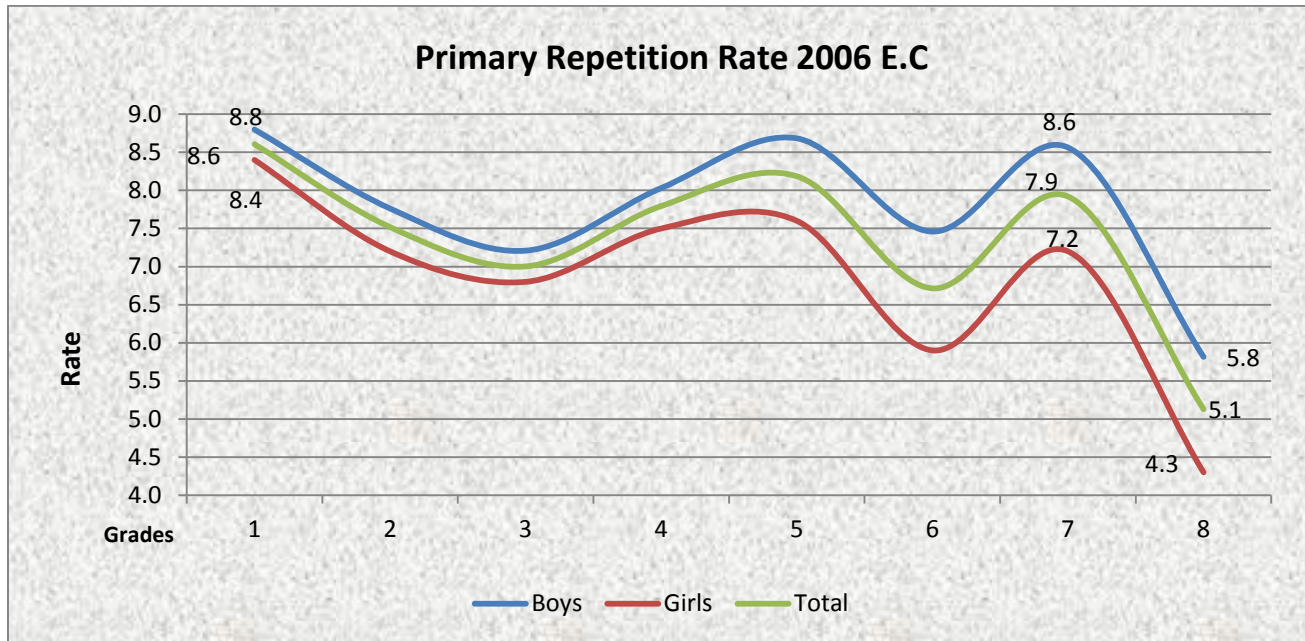

II, Repetition Rate

Repetition Rate is the proportion of pupils enrolled in a given grade for a given year who studies in the same grade for the following year. Data required for this calculation is repeaters of grade **j**, in year **T** and enrolment of grade **j** of year **T-1**. It is interpreted as a high level of the repetition rate indicates a high level of repetition of grades. The problem of repeating has impact on the system. Because.

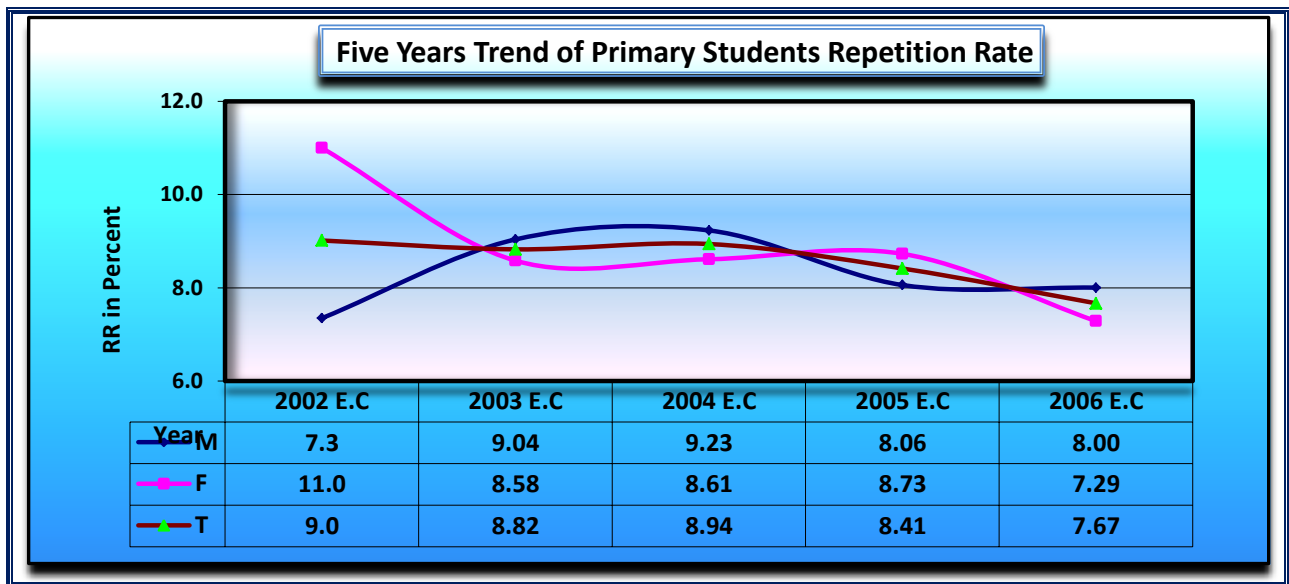

1. Repeating has wasted the resources they have used while they repeat in the same grade.
2. They occupied a school space that can be used by the other new comers. The formula to calculate Repetition Rate is;

$$RR = \frac{\text{Repeaters of grade } j, \text{ year } T}{\text{Enrolment of grade } j, \text{ year } T - 1} \times 100$$

Graph 2.24. Primary Education Repetition Rate

Graph 2.25. Five Years Trend of Primary Students Repetition Rate

In 2007 EFY, repetition is high in primary education, although it has decreased from 9% in 2002 EFY to 7% in 2006 EFY. However, there is some evidence that administrative data understate the level of repetition, as some students may be recorded as new entrants when actually they have dropped out of school and return to the same grade in the following year. This is particularly frequent in Primary first cycle. The pattern of repetition is similar from one grade to

another (see Table 2.58 above), although the level of repetition rates is clearly higher in the lower grades. The repetition rate for Grade 8th is lower than other grades, which is surprising when considering that students who fail the end of primary Regional examination may attempt to sit the exam again by repeating that grade.

2.9.3.3 Primary Education Dropout Rates (DR)

Dropout Rate is proportion of pupils who withdraw from education system for more than one year. It corresponds to the difference between one and the sum of promotion rate and repetition rates. Data required for the calculation of dropout rate are, Promotion Rate and Repetition rate. High dropout rate constitute, interpreted as an obstacle in the achievement of UPE. Dropout problem has different impact on the system. Because

1. Dropouts have wasted the resources.
2. They occupied a school space, which could use the other new comers if they readmitted.
3. They have not acquired the minimal levels of literacy and numeracy if they dropped out in early grades.

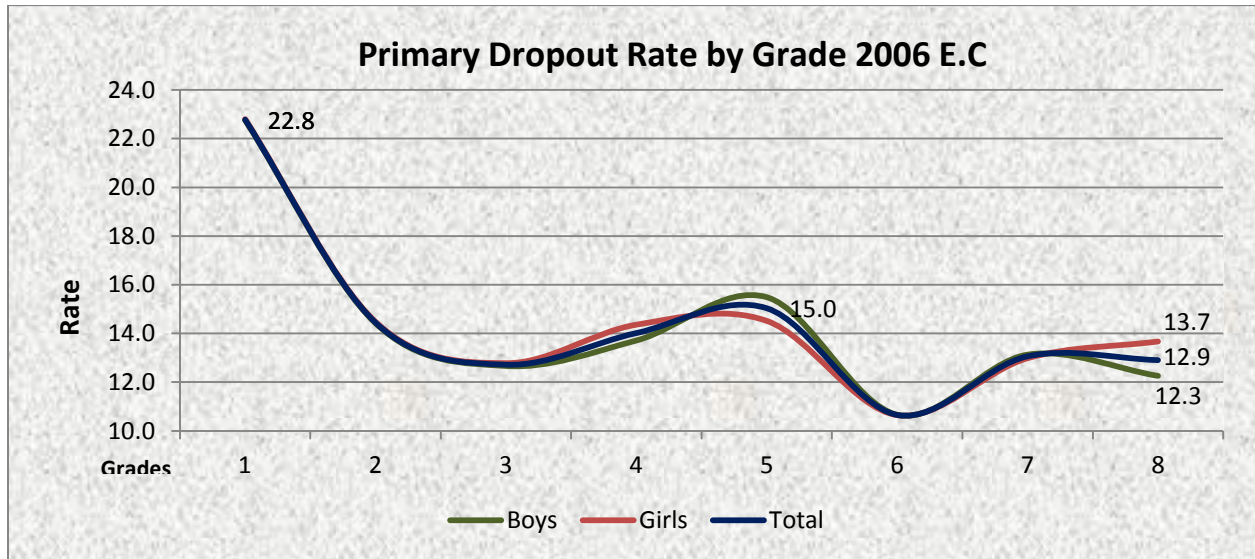

There are two main reasons lead parents to withdraw their children from school,

- (i) Direct, indirect and opportunity costs (school supplies are too expensive, children's help/work is needed at home to contribute to the family economy or take care of younger siblings); and
- (ii) Parents' perceptions of school time tables are thought inappropriate, academic expectations are thought too stringent and so on. Demand for education is therefore closely related to supply.

The formula to calculate dropout is,

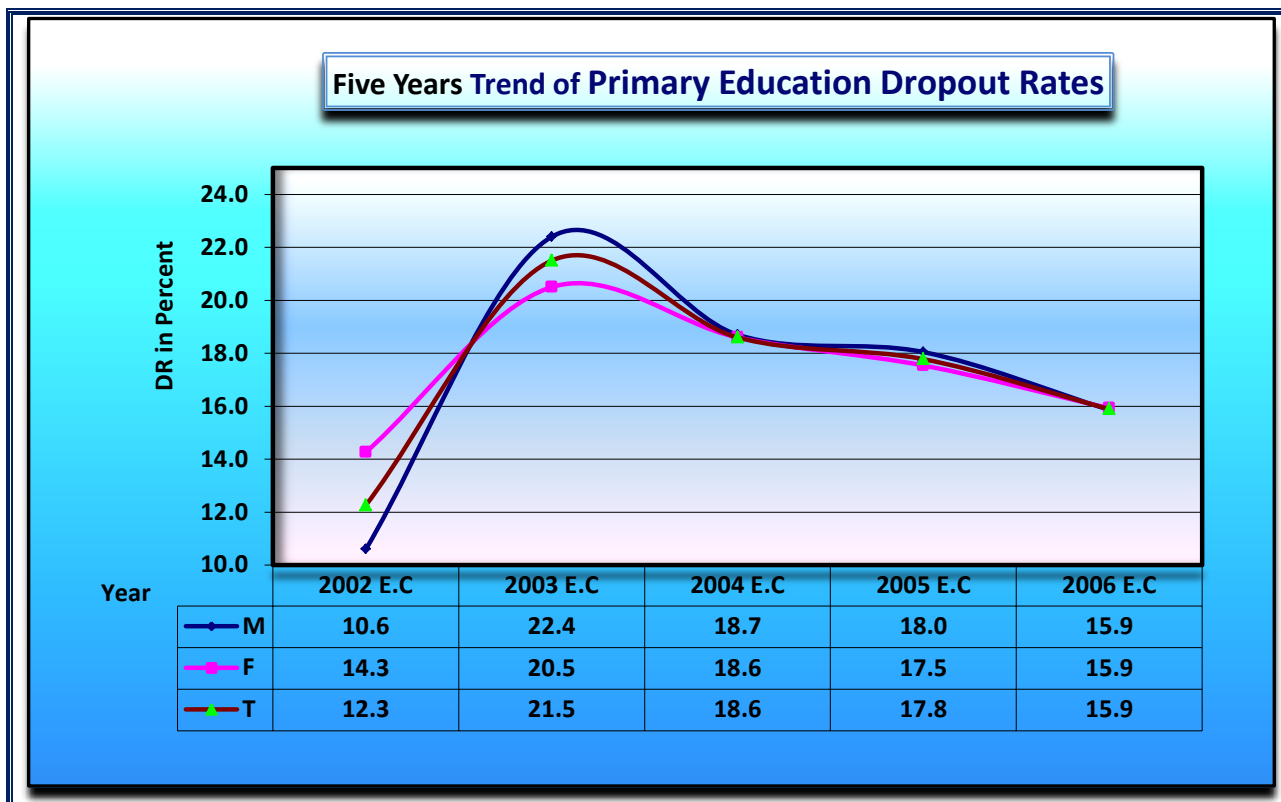

$$\text{Drop-out Rate} = (100 - \text{promotion rate} - \text{repetition rate})$$

Graph 2.26. Primary Education Dropout Rate by Grade

As shown on graph 2.26 above, in 2007 EFY the Dropout rate are higher in Primary first cycle than in primary second cycle. It was 22.8% at grade 1 and 12.9% at grade 8th. Apparently graph 2.27 below indicates the comparison & trend of five years dropout. As shown here it has increased from 12.3 % in 2002 EFY to 15.9 % in 2006 EFY. The trend of Grade 1 dropout on graph 2.28 also shows the slight increment from 22% in 2002 EFY to 22.8% in 2006 EFY. As the data indicates, instead of showing progress the trend of dropout was increased in the reverse way from year to year, so that it needs particular attention before affecting the entire system.

2.9.4 Transition Rate (TR)

Transition Rate is new entrants to the first grade of primary second cycle (5th grade) or the beginning of secondary first cycle (9th grade) in a given year, expressed as a percentage of the number of pupils enrolled in the final grade of primary first cycle or primary second cycle education in the previous year respectively. Data required for calculating is new entrants in first grade of primary second cycle or first grade of secondary first cycle for a given Year **T**, *and* total enrolment in final grade of primary first cycle or primary second cycle for Year **(T-1)**. For example, if the increment of transition rate of primary students to secondary is raised, in the same way the proportion of pupils from primary education who reaches secondary education also elevated up. Method of calculation for **TR** is the following;

$$\text{TR to 4}^{\text{th}} = \frac{\text{New entrants in 5 th for Year T}}{\text{Enrolment of 4 th for Year T - 1}} \times 100$$

$$\text{TR to 8}^{\text{th}} = \frac{\text{New entrants in 9th for Year T}}{\text{Enrolment of 8th for Year T - 1}} \times 100$$

Graph 2.30. Five Years Trend of Transition Rate in Primary Education

2.9.5. Primary Completion Rate

Primary Completion Rate is highly dependent on the accuracy of the single age population for both points of measurement (for Grade 8th, age 14 and for Grade 5th age 11) Table 2.62 below shows the Completion Rates for both Grade 5th and Grade 8th.

A high primary completion rate indicates a high degree of coverage, whether the pupils belong to the population of official/typical graduation age (14 years) or not. A school is classified as incomplete when it does not offer all the grades of a given cycle. In such cases the risk of dropout is high, especially if no alternative school nearby offers the missing grades.

Definition: Total number of candidates who registered for grade 8th living examination regardless of age, expressed as percentage of the total population aged 14 years.

The Primary Completion Rate is internationally an established measure of the outcomes of an education system and calculated with the following formula, Where

“New entrant in last Grade”= (Total pupils in last Grade – repeaters in last grade)

$$\text{Completion Rate} = \frac{\text{New entrant in last Grade}}{\text{Population of official age in last grade}}$$

Relating to the complete primary education completion rate of our Region, among the regional administrative towns; Dukem, Shashemene and Adama towns registered 100%, 96.2% and 86.6% respectively. The least performing Zones of primary completion rate include Hararge West (18.8%), Hararge East (23.4%) and Guji (27.9%).

2.9.6 Primary Education Cohort Analysis

A *cohort* is defined as a group of persons who jointly experience a series of specific events over a period of time. Accordingly, we may define a pupil cohort as a group of pupils who join the first grade of a given cycle in the same school year, and subsequently experience the events of promotion, repetition, dropout or successful completion of the final grade, each in his/her own way.

There are three ways to analyze the internal efficiency of an education system by means of the cohort pupil flow method, depending on the type of data collected: (i) true cohort, (ii) apparent cohort, and (iii) reconstructed cohort. The ideal way to obtain a precise assessment of educational wastage is through the use of the *true cohort method*. This involves either a tracer (longitudinal) study to monitor the progress of a selected cohort of pupils through the education cycle, or through a retrospective study of school records in order to retrace the flows of pupils through the grades in past years.

The true cohort method is costly and time-consuming, and it requires good and reliable school-records with information on individual pupils. For this reason, this method is not yet widely used. In the absence of individualized pupil information, internal efficiency in education can be assessed by putting in to consideration the enrolment data by grade for at least two consecutive years using either the apparent or reconstructed cohort methods.

The apparent cohort method is applied when there is no data on repeaters. Then the enrolment in grade 1 in a particular year is compared with enrolment in the successive grades during successive years, and it is assumed that the decrease from each grade to the next corresponds to wastage. This method, the most commonly used so far, produces very approximate estimates of drop-out, and its main weakness is that it assumes that pupils are either promoted or drop-out of the school system. This method is quite appropriate for countries practicing automatic promotion from grade to grade.

A more pertinent and commonly used method is the reconstructed cohort method; we also used this method for this publication. Reconstructed cohort method is less dependent on the availability of detailed data over time. To apply this method, data on enrolment by grade for two

consecutive years, together with data on repeaters by grade from the first to second year, are sufficient to enable the estimation of three main flow-rates: promotion, repetition and dropout. Once obtained, these rates may be analyzed first of all by grade to study the patterns of repetition and drop-out. Then they can be used to reconstruct a pupil-cohort flow in order to derive other indicators of internal efficiency. This is illustrated as follows.

2.9.6.1 Flow Rates Using Data on Enrolment and Repeaters

The methodology of the reconstructed cohort flow model is based on the fundamental concept that for pupils enrolled in a given grade in a given year, there can be only three eventualities: (a) some of them will be promoted to the next higher grade in the next school year; (b) others will repeat the same grade in the next school year; and (c) the remaining pupils will drop-out of school in the course of the year.

Hypothetical Flow Diagram of the Cohort through Primary Education

Assumption of Cohort Analysis

The flow of a fictitious cohort of 1,000 pupils through the primary education cycle of our Region can be reconstructed below, based on three assumptions:

1. At any given grade, the same rates of repetition, promotion, and drop-out apply, regardless of whether a pupil has reached that grade directly or after one or more repetitions (hypothesis of homogenous behavior), it also assumes that no pupil skips a grade, i.e., there is no double promotion.
2. There will be no additional pupils (new entrants) in any of the subsequent years during the life time of the cohort, other than original cohort of 1,000 pupils; and no in-migration or out-migrations throughout the cohort years.
3. Pupils in a grade are, allowed to repeat only twice. However, in reality a pupil may repeat a grade more than twice. In this case, the assumption remains constant and allows only for the repeating of the grade twice.

In analyzing hypothetical flow diagram of reconstruction cohort method of our Regional Government primary education system one can analyze as follows. There was 1,700,671 pupils registered in grade 1 in 2006 EFY.

To reconstruct the history of 1,700,671 pupils entering grade 1, it is easier to express this starting cohort as an index of 1,000 pupils, and all operations are consequently translated in ‘per thousand’ terms. Thus, when applying each flow-rate for grade 1 to this fictitious cohort of 1,000 pupils (instead of the actual 1,700,671 pupils), one finds that 86 pupils repeated grade 1 (8.6 percent); 228 dropped-out (22.8 percent), and 686 were promoted to grade 2 (68.6 percent). Using the flow rates for grade 2 on the 686 pupils reaching grade 2, one can derive that 52 repeated grade 2 (5.2 percent); 99 dropped-out (9.9 percent) and 535 were promoted to grade 3 (5.35 percent) and so on. It may be noted that the first diagonal row in the diagram below (next page) is obtained by multiplying the successive promotion rates for successive grades and successive years. The repetition and dropout rates are then applied to obtain the second, the third and the fourth rows.

From this flow diagram, one can draw a number of interesting observations. For instance, out of the initial 1,000 pupils entering grade 1, only 138 graduated from the cycle without repeating any grade; 81 graduated with a one year delay, i.e. they repeated once; 27 graduated with two years delay, i.e. they repeated twice.

In addition, this flow diagram enables the computation of the main indicators of internal efficiency. For example, the figures in the boxes below the diagram give the number of pupils reaching a particular grade, thus enabling the calculation of the survival rates by grade. One can observe that 750 out of the 1,000 pupils in the cohort (or 75.0 per cent) reached grade 2. These figures can be easily derived from the upper part of the diagram, by summing the number of drop-outs from each grade and each year and subtracting that sum from the enrolment in the same grade. For grade 1 we obtain $228+20+2 = 250$ drop-outs, which when subtracted from 1,000 would give 750 survivals. Finally by summing the drop-outs from each grade ($250+117+86+82+75+43+47+35$) we find a total of 740 pupils who dropped out without completing primary education (as graduates). Thus, out of the initial pupil cohort of 1,000, only 246, or about 24.6 per cent, graduated from the primary cycle. The rest 14 students repeat at the last grade of the cohort.

Multiplying this number of graduates by the number of grades ($246 \times 8 = 1,968$) would give the ideal number of pupil-years required to produce the graduates. The ratio between the latter and

the actual number of pupil years used by the cohort, i.e. 4,741, gives the coefficient of efficiency ($1,968 \div 4,741 = 0.415$ or 41.5 percent). The years input per graduate (19.75 years) is obtained by dividing the total number of pupil-years spent by the cohort (4741) by the total number of graduates (240). The years input per graduate can then be compared to the ideal number required, which is simply the duration of the education cycle 8 years of the cohort.

2.9.6.2. Internal Efficiency of the Cohort in Primary Education

I. Pupils Year by Grade of the Cohort

Table 2.69. Pupils Year by Grade of Cohort

Pupils Year by Grade of Cohort Analysis								
sex	Grade							
	1	2	3	4	5	6	7	8
M	1096	812	679	589	502	409	362	299
F	1091	808	677	587	494	407	364	302
average	1093	810	678	588	498	408	363	301

I. Indicators of Retentions by Grade of the Cohort

a. Survival Rate of the Cohort

The purpose of survival rate is to measure the holding power and internal efficiency of the education system. It illustrates the situation regarding retention of pupils from grade to grade in school, and conversely the magnitude of dropout by grade. Survival rate is the proportion of cohort pupils who reached the subsequent grade expressed as a percentage of pupils enrolled in the first grade of a given cycle in a given school year. It also used to measure the impact of repetition and dropout on internal efficiency. Survival by grade obtained by adding the number of pupils who eventually will promoted to the next higher grade. In each grade, some pupils promoted to the next grade without repeating a grade and others after repeating once or twice.

Table 2.70. Primary Education Cohort Analysis Survival Rate by Grade

Primary Education Cohort Analysis Survival Rate by Grade								
Sex	Grade							
	1	2	3	4	5	6	7	8
M	75.0	63.2	54.4	46.1	38.3	33.5	28.4	24.5
F	75.1	63.3	54.5	45.9	38.7	34.0	29.0	24.8
average	75.0	63.2	54.5	46.0	38.3	28.7	28.7	24.6

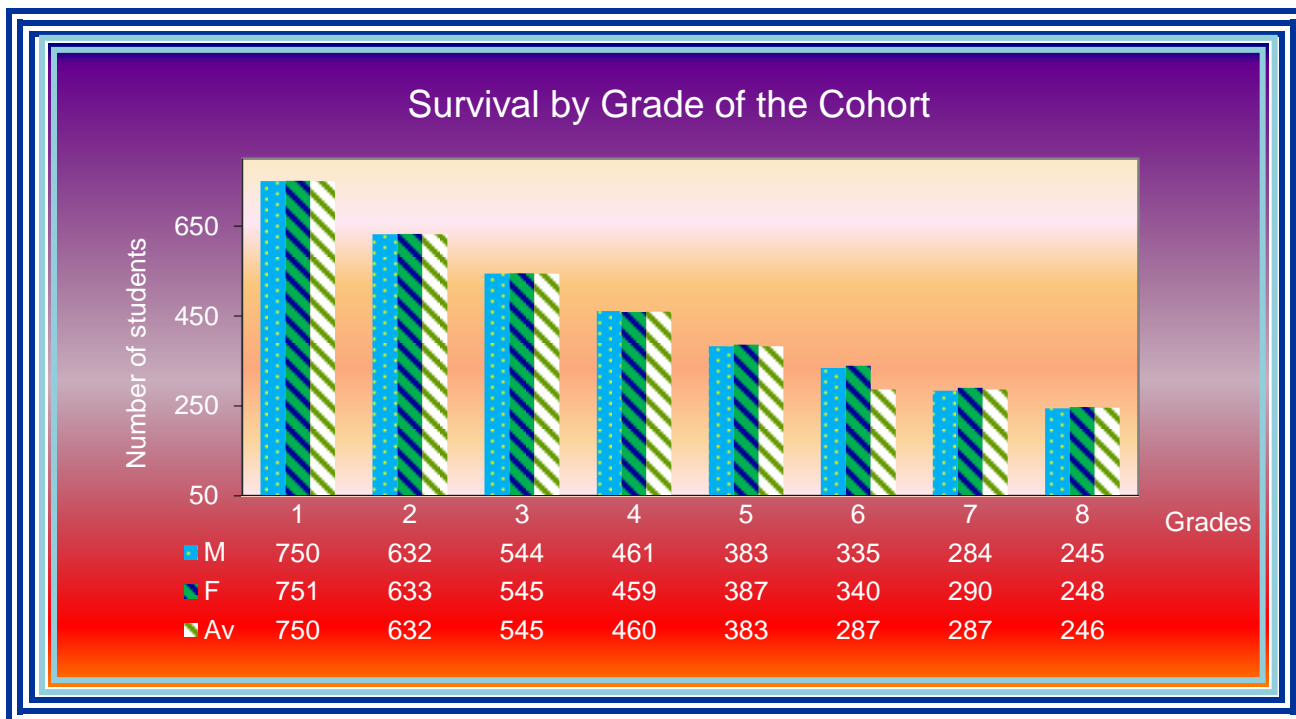

As the table 2.70 above shows among 1000 students enrolled in grade 1, only 75% (M=75%, F=75.1%) are survived in the cohort. The rest 25% (M=25%, F=24.9%) left the school before completing grade 1. Besides, only 46% (M= 46.1% and F= 45.9 %) students survived to complete first cycle primary.

From the 1000 pupils started the cohort, only 24.6% (M=24.5%, F= 24.8 %) will finally survive at grade 8th. This shows that 75.4% (M=75.5%, F=75.2%) of students left the system without completing primary education. So we can imagine how the issue needs serious attention from the

Table 2.71. Number of Pupils Survived in Each Grade of the Cohort

Number of Pupils Survived in Each Grade of the Cohort								
Sex	Grade							
	1	2	3	4	5	6	7	8
M	750	632	544	461	383	335	284	245
F	751	633	545	459	387	340	290	248
average	750	632	545	460	383	287	287	246

Graph 2.31. Survival by Grade of the Cohort

b. Dropout by Grade of the Cohort

As shown in the table 2.72 below, most of the students leave the system early in grade 1 and 2. About 24.91% (M=24.94%, F=24.87%) of the cohort left the system before completing grade one. Majority of children leave the system at an early stage compared to dropouts at upper grades. This is an undesirable situation, to which planners and decision makers should pay immediate attention to it.

Table 2.72. Percentage of Dropout by Grade of the Cohort

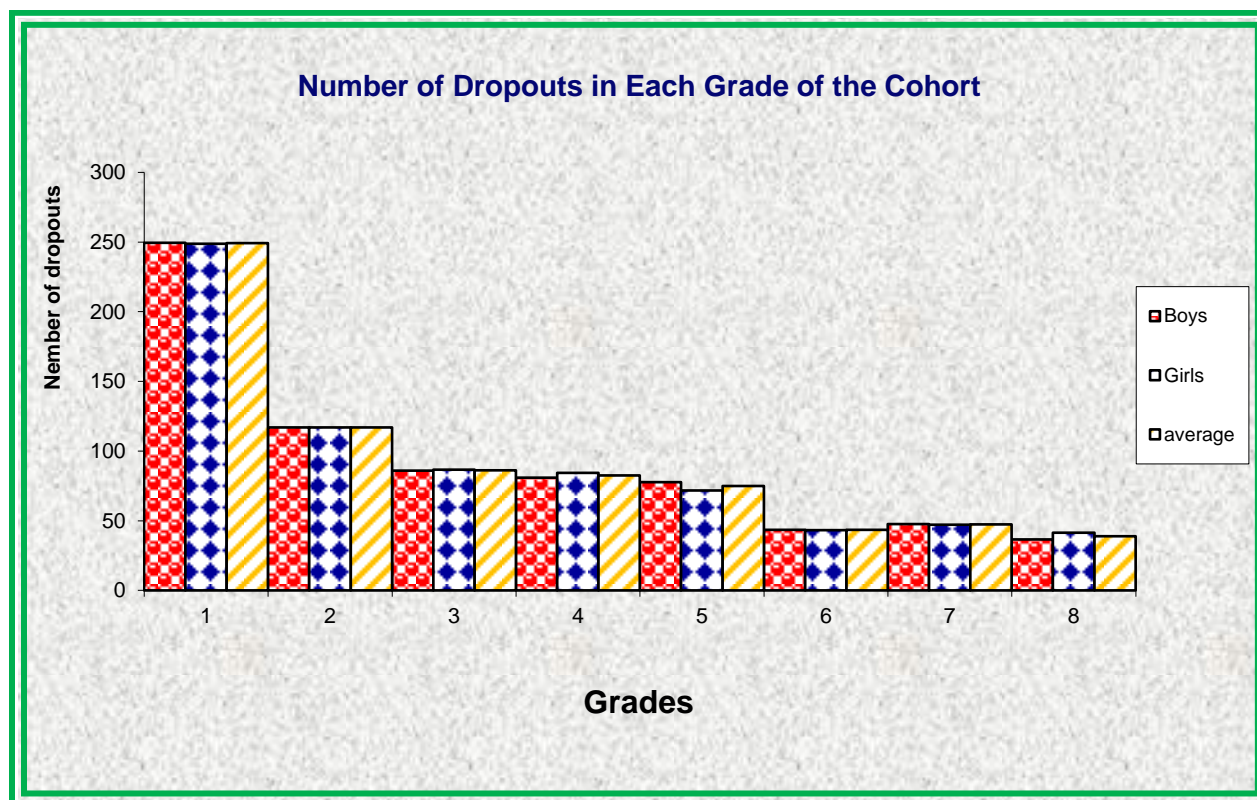

Percentage of Dropout by Grade of the Cohort								
Sex	Grade							
	1	2	3	4	5	6	7	8
M	24.94	11.70	8.60	8.08	7.78	4.36	4.76	3.67
F	24.87	11.70	8.66	8.43	7.17	4.33	4.72	4.13
average	24.91	11.70	8.63	8.25	7.49	4.35	4.74	3.88

Dropout is the proportion of students who leave the system at each grade. It is the most serious problem in education system. As the cohort data on the table 2.73 shows that among the cohort of 1000 pupil, 249 of them left the school before completing grade one.

Table 2.73. Number of Dropout by Grade of the Cohort

Number of Dropout by Grade of the Cohort								
Sex	Grade							
	1	2	3	4	5	6	7	8
M	249	117	86	81	78	44	48	37
F	249	117	87	84	72	43	47	41
average	249	117	86	82	75	43	47	39

Graph 2.32. Number of Dropouts in Each Grade of the Cohort

C. Repeaters by Grade of the Cohort

TABLE 2.74. REPEATERS BY GRADE OF THE COHORT

Repeaters by Grade of the Cohort								
Sex	Grade							
	1	2	3	4	5	6	7	8
M	96	63	49	47	44	30	31	17
F	91	59	46	44	38	24	26	13
average	94	61	48	46	41	27	29	15

The cohort data on the table 2.74 above shows that, among the cohort of 1000 pupils 94 of them repeated at grade one, number of repeaters gradually decreases from grade to grade while it goes up to the higher grade as shown on the table.

Graph 2.33. Number of Repeaters of the Cohort by Grade

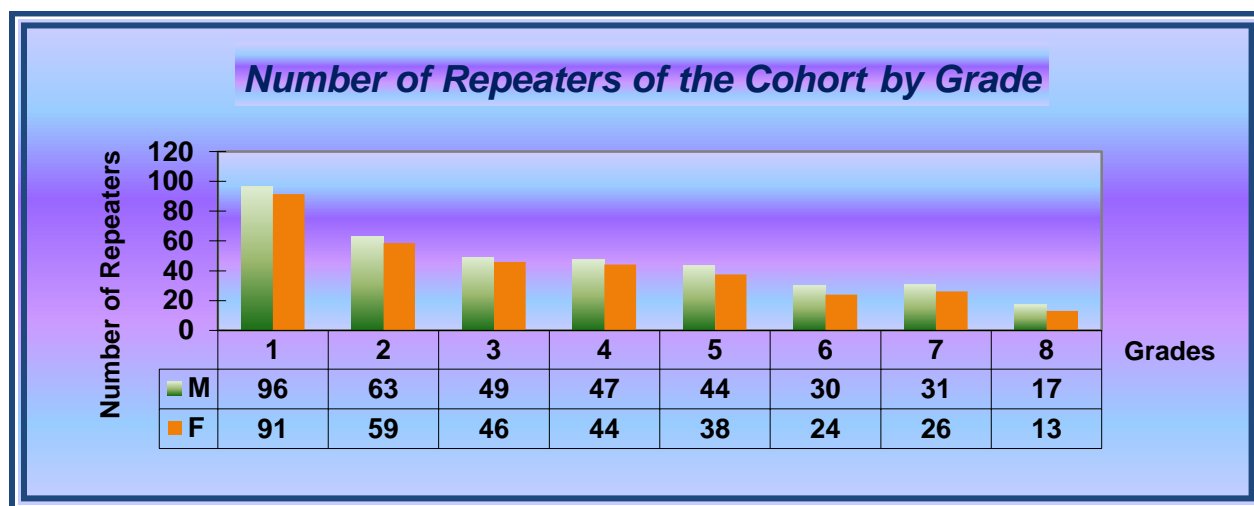

Table 2.75. Percentage of Repeaters by Grade of the Cohort

Percentage of Repeaters by Grade of the Cohort								
Sex	Grade							
	1	2	3	4	5	6	7	8
M	9.6	6.3	4.9	4.7	4.4	3.0	3.1	1.7
F	9.1	5.9	4.6	4.4	3.8	2.4	2.6	1.3
average	9.4	6.1	4.8	4.6	4.1	2.7	2.9	1.5

Table 2.75 above shows that 9.4 % (M=9.6%, F=9.1%) of the cohort repeats at grade 1. When we compare both levels, majority of children repeat in the early grades than the upper one.

D. Number of Graduates from the Final Years of the Cohort

Graduates from the final year is the number of pupils who eventually graduate (Complete) from the final year of the cycle. In other words, those who successfully complete primary first cycle of 4 years of study and promoted to the first grade of second cycle primary (Grade 5th) or those who successfully complete second cycle primary of 8 years of study and promoted to first cycle secondary (Grade 9th). According to the cohort shown on table 2.66, out of 1000 pupils registered in 2006 E.C at grade one, 336 pupil's graduate grade 4th without repeating any grade during their stay in school. Another 104 pupil's also graduate grade 4th after repeating once and 20 of them graduated after repeating twice in any of the grades. Number of graduates of first cycle primary for this cohort is 460.

Similarly, 138 pupils graduate grade 8th by 2013 E.C. without repeating, 81 pupils graduate grade 8th in 2014 E.C by repeating once, finally 27 pupils also graduate grade 8th by 2015 E.C by repeating any of the grade twice. According to the cohort, the possible number of pupil graduates from the complete primary system or grade 8th is only 246. Accordingly, only about 24.6% of the pupils complete primary education out of 1000 pupils of the cohort system. Unfortunately about, 754 (75.4%) pupils of the cohort were left the system before completing primary education. Therefore, Educational planners, policy makers, decision makers, stakeholders and communities must work towards finding the solutions to improve this huge gap.

3. Secondary Education

Introduction

Government continues to address challenges associated with ensuring quality and inclusive education in the Secondary sub-sector. The sub-sector is charged with the duty of providing places for the masses from Universal Primary Education (UPE). This is also in line with government commitment to the achievement of the MDGs & EFA goals by 2015.

Secondary education is composed of two cycles, they are General Secondary Education (9-10) and Preparatory classes (11-12). General secondary education (9-10) is designed to continue the basic programs of the primary level, but the teaching is typically more subject focused and requires more specialized teachers for each subject area. The end of this level often coincides with the end of compulsory education. A preparatory class (11-12) is the final stage of secondary education and the entry point to the higher institution. Therefore, instruction is often organized and even more along subject lines and teachers, typically need a higher or more subject-specific qualification. Let us look at different indicators of secondary education of our region.

This chapter gives key statistical indicators about the state and developments in the Secondary sub-sector in year 2007 EFY. These among others include; equitable access, quality and internal efficiency of secondary education at glance.

3.1. Secondary Schools Information

3.1.1. Secondary Schools by Ownership & Cycle

As Table 3.1 shows, the private sector owns 10.0% of the secondary (9-10) schools as compared to 90.0% government ownership, whereas 9.8% and 90.2% of preparatory schools are under the ownership of private and Government control respectively. As the data shows Government involvement is seems like higher than private ownership in secondary education.

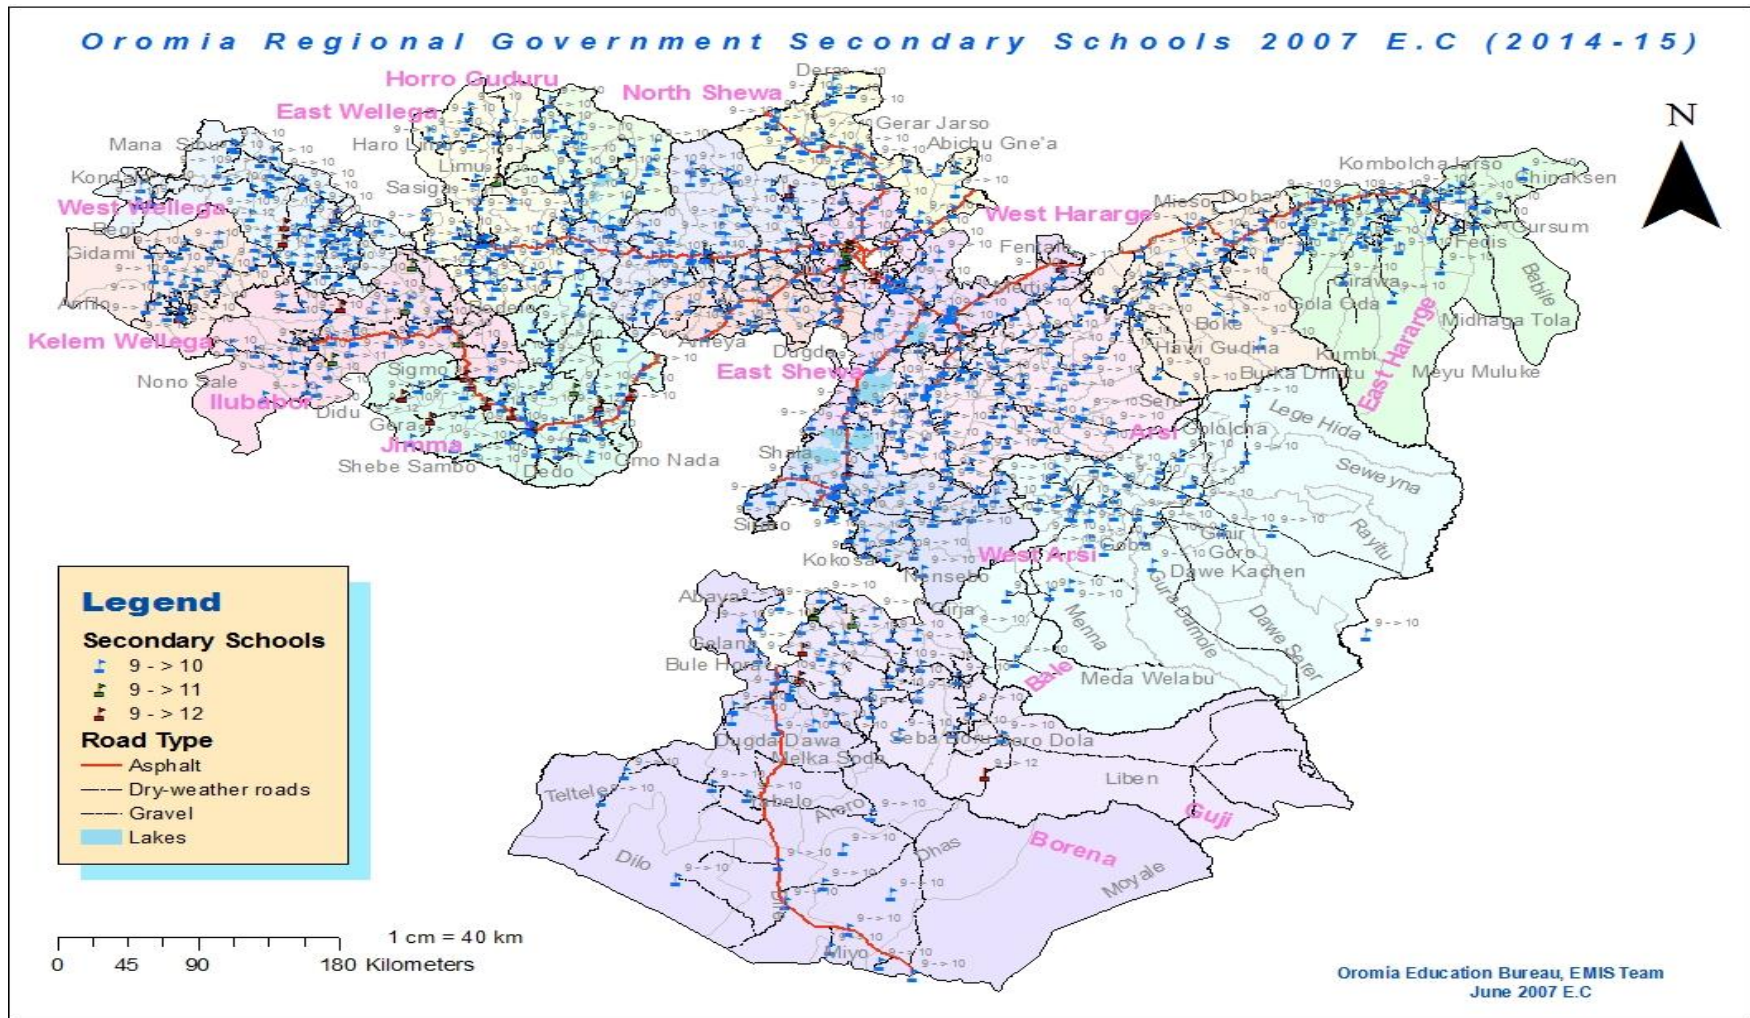

In terms of zonal distribution, 10 zones and two admin towns of secondary (9-10) and 12 zones and five admin towns of secondary (11-12) schools are owned by Government. This indicates that, the ownership of private sector in secondary schools was also less as well at zonal and administrative towns just like Regional level.

Table 3.1. Secondary Schools, By Ownership and Cycle

3.1.2. Geographical Locations of Secondary schools

Map 4. Geographical Locations of Secondary first Cycle (Grade 9-10) schools

Map 5. Geographical Locations of preparatory (Grade 11-12) schools

Map 5 and 6 shows the distribution of secondary and preparatory schools in the Region. The map is sketched with the scale of 1 cm on the paper to 40 km on the land. As we can see from the map the schools were relatively denser in the central and North East & west areas of the region for secondary first cycle and scattered in the other areas as shown on the map, whereas the distribution of preparatory schools were also more scattered than secondary schools, specifically in the south eastern boarder part of the region like Borena, Guji and Bale Zones. The point data on the map shows schools by grade level with different colors, besides the map also shows the name of woredas and the accessibility of the road to schools by type of the road.

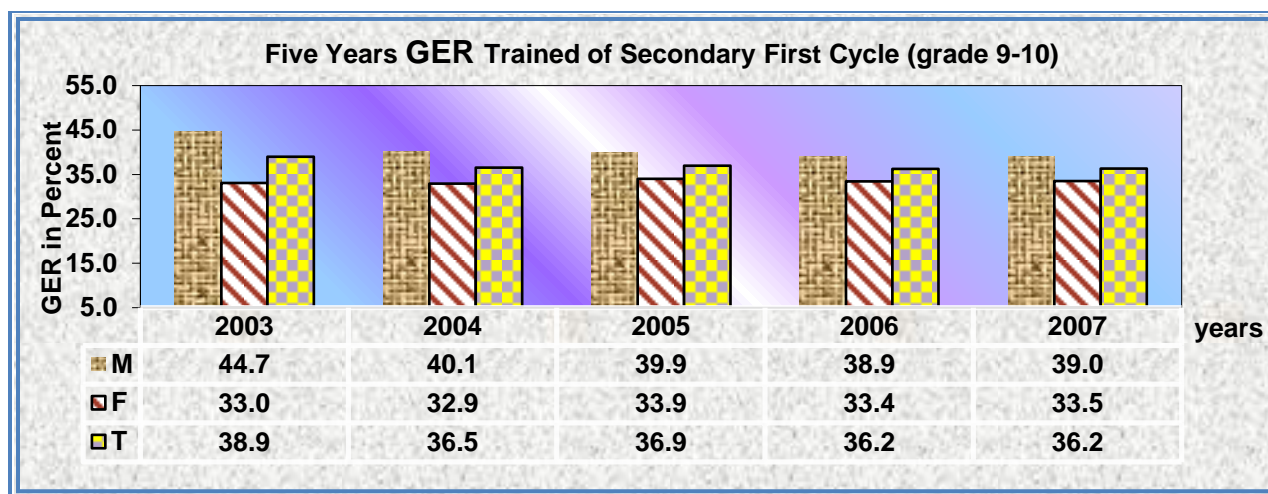

3.2. Equitable Access of Secondary Education

Access is the extent to which the secondary school age population is able to join this particular level of education. Equity implies a reduction in disparities based on gender (Male/Female) and geographical location (Urban/Rural). Equity also ensures that, all students in every school will be able to avail themselves of the services, technology, materials and the qualified teaching staff that able to achieve educational success. Besides, it indicates fairness in the distribution of opportunities for education, and is the main indicator that shows educational performance.

3.2.1. Gross Enrolment Rate (GER) of General Secondary Education Grade (9-10)

GER of general secondary education (Grade 9-10) is the proportion of all enrolments regardless of school age population at this level. It compares the total number of students in the general secondary school with the school-age population of this level. In Ethiopia, the official school age for secondary first cycle is from 15-16 years old.

Graph 3.1. Five Years GER Trained of Secondary First Cycle (grade 9-10)

As shown in graph, 3.1 above, GER of secondary first cycle in 2003 E.C was 38.9% (M=44.7%, F=33.0%) and apparently the rate was slumped to 36.2% (M=39.0%, F=33.5%) by 2007 E.C. However, the reasons for the highly declining of GER were not yet identified through research. Thus, whatever the reason it needs serious attention from educational officials and concerned bodies.

The table 3.2 above also shows that, GER of 2007 E.C is 38.9% (M=44.7%, F=33.0%) for secondary school (9-10) at regional level. From the same table it is possible to see that there are eight Administrative towns that have GER greater than 100%. Even though, the causes haven't been identified with basic research yet, the major suspected reason behind the exceeding 100% of GER in those administrative towns was that, students who are living in surrounding zones came to those towns to attend their high school education. This may led to the increment of enrolment in secondary education. That is why the rate goes beyond the expected rate when it is calculated in respect of school age population of those towns.

3.2.2 .Net Enrolment Rate (NER) in Secondary First Cycle (9-10)

For this level, we consider students enrolled in secondary first cycle whose age is from 15-16 and compare it to the total number of population belonging to the mentioned age group.

Graph 3.2. Five Years NER Trend of Secondary First Cycle (9-10)

Graph 3.2 above indicates the NER of secondary education (9-10) of the past five years. For example, in 2003 E.C. the NER of secondary (9-10) was 14.2% (M=14.7%, F=13.8%) and rose to 17.5 % (M=17.8, F=17.3%) in 2007 E.C. As the data indicates NER of the level didn't show significant change during the last five years. So, the issue needs attention from the education officials and concerned bodies.

Table 3.4 above shows NER 17.5% (M=17.3, F=17.8%) at secondary education (9-10) in 2007 E.C. Likewise, seven zones and all administrative towns have registered above the regional NER whereas; eleven zones of the region have registered less than the regional average of NER 17.5%. Therefore, the issue needs particular attention to improve the huge gap shown in these zones.

Table 3.5. Trend of Gender Gap by GER in Secondary & Preparatory Education for the Last Five Years

Trend of Gender Gap by GER in Secondary & Preparatory Education for the Last Five Years						
Year	GER Secondary (9-10)			GER Preparatory (11-12)		
	M	F	Gender Gap	M	F	Gender Gap
2003	44.7	33.0	11.7	8.5	4.9	3.6
2004	40.1	32.9	7.2	8.8	5.6	3.2
2005	39.9	33.9	6.0	9.1	6.1	3.0
2006	38.9	33.4	5.5	8.7	6.3	2.4
2007	39.0	33.5	5.5	9.0	7.2	1.8

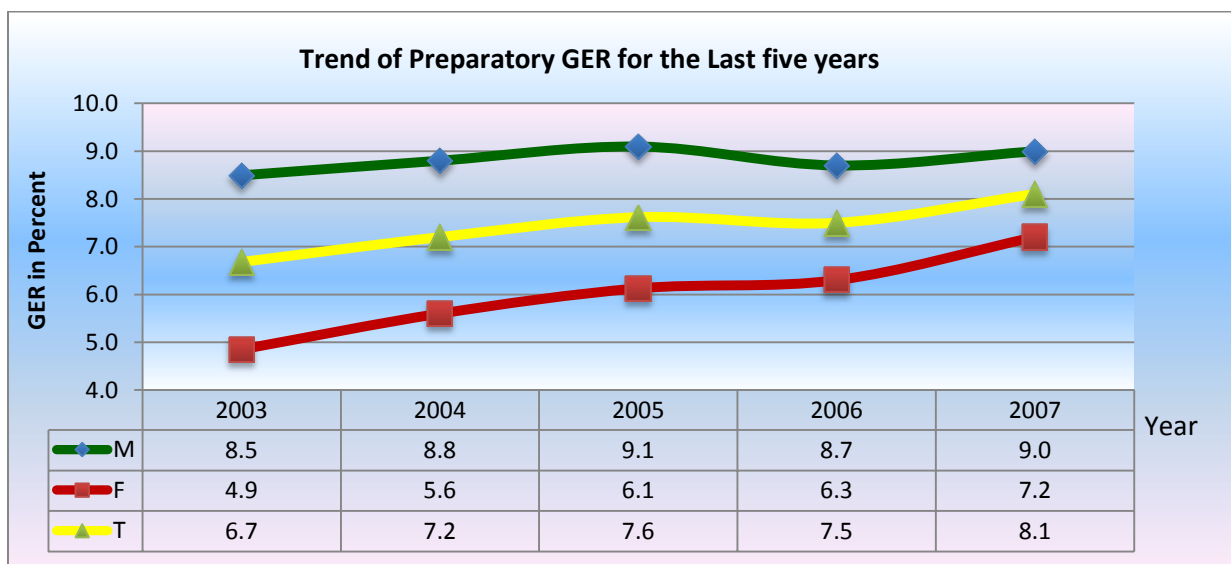

Concerning the gender gap table 3.5 above shows, better improvement in the last five years, the gender gap of (9-10) decrease from 11.7% in 2003 E.C. to 5.5% in 2007 E.C. with AAGR of 16.7% whereas, the gender gap of (11-12), decline from 3.6% in 2003 E.C. to 1.8% in 2007 with AAGR of 11%.

Graph 3.3. Five Years Trend of Secondary (9-10) Gender Gap

3.2.3. Gross Enrolment Rate (GER) of Preparatory (11-12)

Graph 3.4. Five Years Trend of Secondary (11-12) Gender Gap

As shown in graph 3.4 above, the GER of preparatory (11-12) shows a little improvement in the last five years. For example, it was 6.7 % (M=8.5%, F=4.9%) in 2003 E.C and increased to 8.1% (M=9.0%, F=7.2%) in 2007 E.C (2014/15 G.C) with the average annual growth rate of 5.6%.

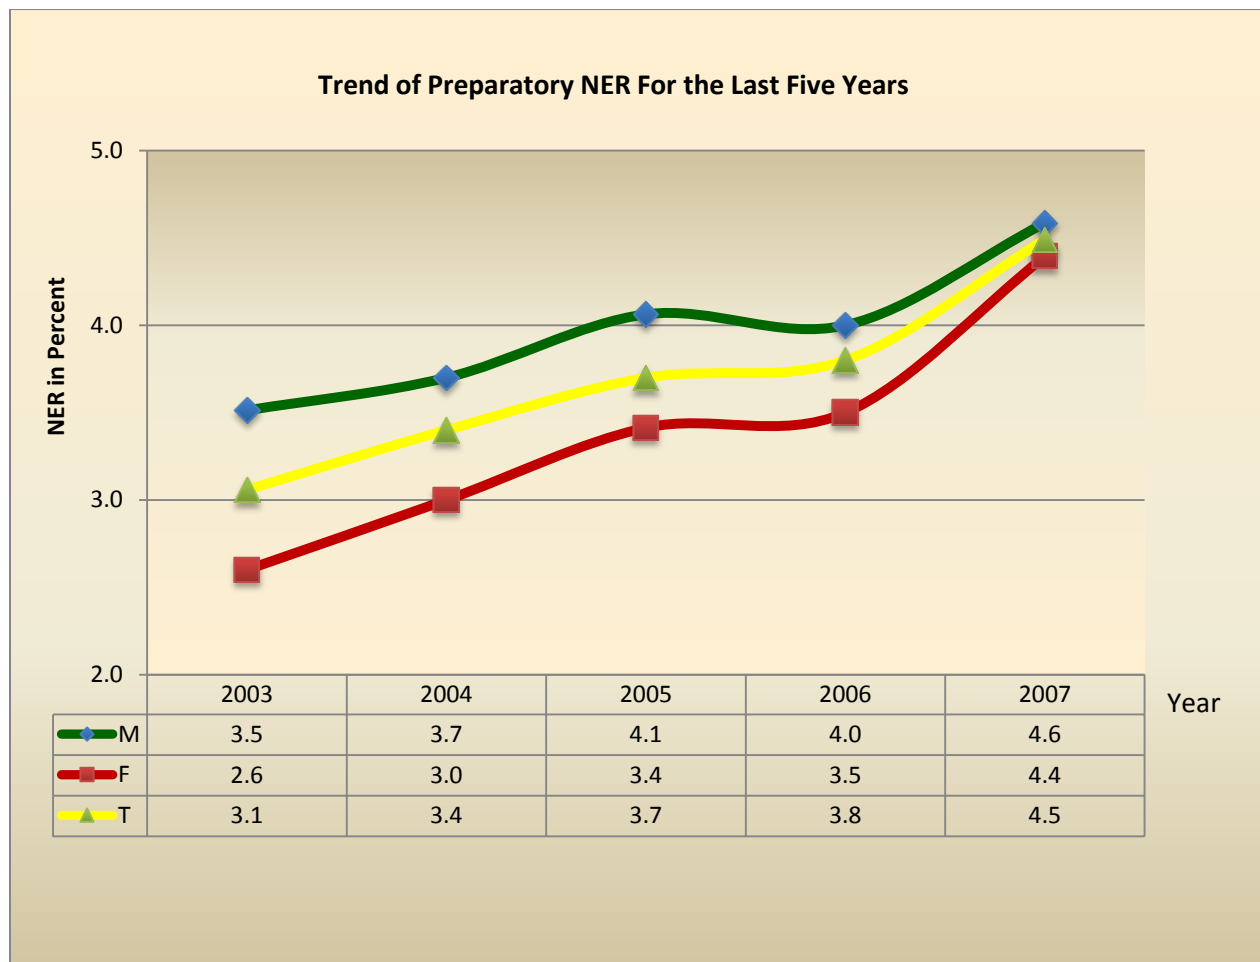

Table 3.6 below shows the GER by zone and administrative towns. As can be seen in the figure almost all of the secondary school students in particular the preparatory enrolments are concentrated in the urban areas. There are also zonal disparities in the urban areas of the region with regard to enrolment in 1st cycle secondary schools. Among all zones the five zones with lower GER are Jima (2.5), East Hararge (3.1), Ilu Aba Bor (3.2), West Hararge (3.5) & Bale (3.6). On the other hand the three zones with relative higher average GER are Horo guduru Wollega (27.6), West Wellega (15.4) and East Wollega (13.8). Regarding Administrative towns although all of them have registered GER above the Regional average 8.1, Nekemte (71.4) and Asella towns (51.1) have registered above 50%, whereas among administrative towns; Gelan (14.6), Lege tafo (14.5) and Sululta 8.3% have registered the lowest GER of Preparatory schools.

3.2.3. Net Enrolment Rate (NER) of Preparatory (11-12)

Graph 3.5. Five Years Trend of Preparatory NER

As shown in graph 3.5 above, NER of Preparatory schools (11-12) has steadily increased for the last five years. For example, it was 3.1% (M=3.5, F=2.6%) in 2003 E.C. and then rose to 4.5% (M=4.6%, F=4.4%) in 2007 E.C. with AAGR of 8.73%.

Table 3.7 above shows NER and GPI of preparatory schools in 2007 E.C, as illustrated on the table zonal and administrative town's performance on NER is quite far apart from one other. Accordingly, the three high NER registered administrative towns are Dukem, Nekemte and Asella have 48.2%, 44.7% and 35.3% respectively. Whereas, Jimma, Hararge East and Guji zones are the three least NER registered zones those have 1.3%, 1.4% and 1.8% respectively. Concerning gender parity index /GPI/, it has been 0.9 in 2006 E.C and this value is improved to 0.96 in 2007 E.C.

3.3. Quality Indicators of Secondary & Preparatory Education

Major educational inputs that contribute a remarkable role to ensure quality of education are the availability of sufficient and qualified teachers, class size and text books. As compared to the primary education the percentage of qualified teaches, student-teacher ratio and student-section are better for secondary& preparatory education in the region. The minimum qualification required for first cycle and second cycle secondary school teachers is BA/BSc or BEd.

3.3.1. Secondary & Preparatory School Teachers qualification

Table 3.15. Percentage of Qualified Secondary & Preparatory School Teachers

As shown in the table 3.25 above, in 2007E.C (2014/15G.C), Teacher to student ratio of secondary & preparatory education (9-10) and (11-12) were 1:27 and 1:21 respectively. As data shows Gelan Town, as well as Borena and West Harerge Zones have the least Teacher to student ratio in secondary first cycle /9-10/ which are 1:18 & 1:21 respectively. In preparatory grades (11-12) Bale Zone as well as Lege Tafo and Sululta towns had the least teacher-student ratio which was 1:11 for each.

Graph 3.6. Five Years trend of Secondary (9-10) Students Section Ratio

As can be seen from graph 3.6 above, the trend of Student-Section ratio for secondary first cycle /9-10/ has been slightly fluctuating from year to year. In 2003 E.C. it has been (64:1) however it shows a slight improvement in 2006 E.C by declining to (61:1). Additionally table 3.26, also shows the Student-Section ratio at zone level, accordingly, for grade (9-10) SSR, only Bale zone is approaching to the standard which has to 50:1.

The table 3.40 above illustrates that by 2006 E.C (2013/14 G.C.) the repetition rate of secondary school /9-10/ at regional level was 9.0% (M=10.1%, F=7.7%). Nevertheless, zones are having different value than the region. For Instance, Adama, Dukem and Sululta Administrative Towns have the lowest repetition rate, 2.09%, 2.12% and 2.95 respectively. On the other hand Kellem Wollega, Guji and West Harerge zones have the highest repetition rate, 17.7%, 15.3% and 14.2% respectively. This table also elaborates the repetition rate in preparatory school by indicating repetition rate, 3.1% (M=3.9%, F=2.0%), at regional level.

Mean while this data have difference in values in all over the zones and Administrative towns of the region. For instance East Hararge, South West Shoa and West Harerge have the highest repetition rate of 9.3%, 9.1 % and 6.5% respectively. On the other hand as the data shows; Dukem, Gelan and Sululta Administrative Towns are without any repeaters.

Regarding to dropout, table 3.40 demonstrates that 15.1 % (M=17.0%, F=12.7%) and 7.3% (M=7.4%, F=7.2%) for grade 9th and 11th at Regional level respectively. The three zones that have largest dropout rate of grade 9th are East Hararge, West Hararge and Arsi 26.1%, 22.4% and 19.5% respectively. For grade 11th the highest dropout was registered in Harerge East, Arsi and West Arsi, 14.8%, 14.6% and 14.1% respectively. Conversely, the Administrative Towns that registered the least dropout for grade 9th are Sebeta, Nekemte and Gelan Administrative Town 7.5%, 3.2% and 1.5% respectively. Regarding to grade 11th Adama and Sebeta Administrative Town and North Shoa Zone had the least dropout rate, which was 1.1%, 1.5% and 1.7% respectively.

CHAPTER TWO

4. Non Formal Education

4.1. Alternative Basic Education /ABE/

Basic education is the whole range of educational activities taking place in various settings (formal, non-formal and informal) that aimed to meet basic learning needs. In Dakar Framework, the term is having an implication similar to the broad EFA agenda. The program should receive wide spread public support for reasons that include considerations of literacy as fundamental human right. As the fact indicates illiteracy accompanies poverty and a low life expectancy. Alternative Basic Education (ABE) is intended to address the Primary education needs of children who are substantially older than primary school ages of 7-14. Moreover, ABE enrollments have contribution in reporting GER and NER of 1st cycle primary with regular program. In paying attention for the issue, our region has planned to reduce illiteracy in this regard. Even though great efforts have made to meet the access, still hard work is expected to attain the plan. In this publication under this title we attempted to specify the data of Alternative Basic Education (ABE) and Integrated functional adult literacy (IFAL) program.

Graph 4.1. Five Years trend of ABE Enrolment

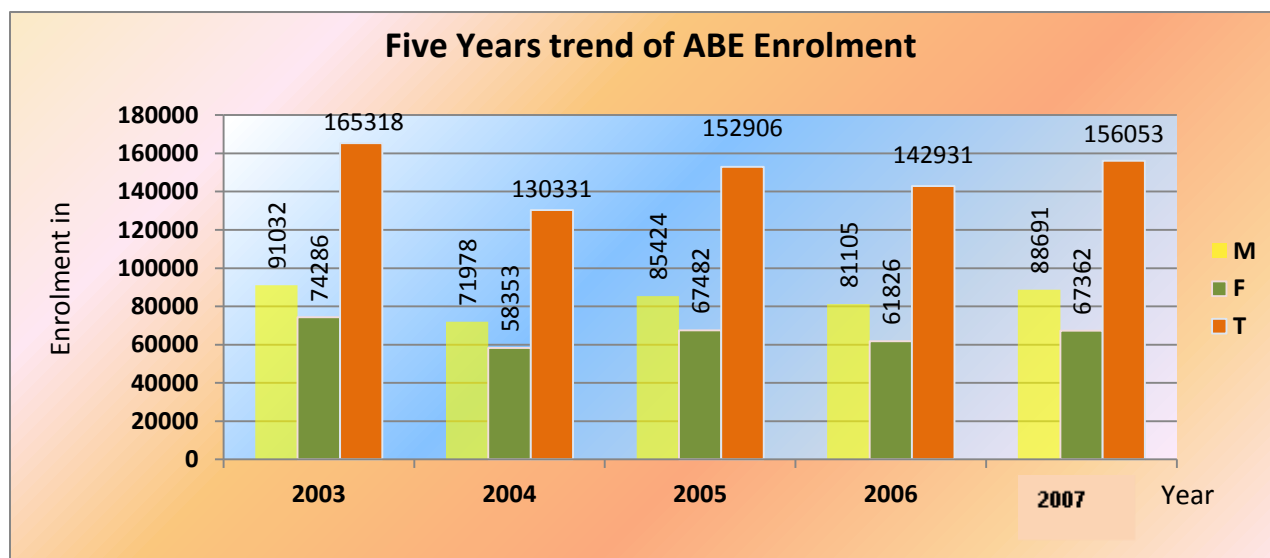

Table 4.1. Five Years trend of ABE Enrolment

Five Years Trend of ABE Enrolment, 2003-2007 EFY			
Year in E.C	Number of ABE Enrolment		
	Male	Female	Total
2003	91032	74286	165318
2004	71978	58353	130331
2005	85424	67482	152906
2006	81105	61826	142931
2007	88691	67362	156053

As indicated on table 4.1, ABE enrolment was slightly declined from year to year. This might be taken as the indicator of the assumption that, out of school children enrolled (joined) the regular schools than ABE centers. Therefore, the participation of children in ABE program decreases from year to year. Nevertheless, this assumption might not be correct because of different reasons. For example, practically hundreds of out of school children are still not joining the school system in the region. Hence, even though basic research didn't attempt to identify the cause yet, our assumption for the challenges happened might be; low community participation, low supervision and low follow-up of education sector at grass-root level, less interest and motivation of ABE facilitators, low participation of NGOs (both local and international) to promote the ABE program in the region and the like are the expected assumptions. Therefore, the issues needs serious attention and follow up.

CHAPTER THREE

Tertiary Education

6. College of Teachers Education (CTE)

Colleges of Teachers' Education (CTE) are institutions those aimed to train teachers for primary schools. There are 12 CTEs in the region in 2007 E.C those have been striving to fulfill the desired teachers in quality and quantity wise for the sector in regular, distance and evening diploma program, in addition to these instructions have been fully dedicated to in-service-training that helps TTI teachers to upgrade to the Diploma level in summer program too.

In this publication enrolled graduated and attrition of candidate teachers in different Diploma program as well as permanent and part time staff of CTEs are included.

6.1 Enrolment in Diploma Program

6.1.1 Enrolment in Regular Diploma Program

As can be seen from table 6.1 below in all the 12 CTEs a total number of 15,691 (7313 male & 8378 female) candidate teachers were enrolled for regular diploma program, for three years study amongst; 9,292 (4,219 male & 5,073 female), 5,937 (2,849 male & 3,088 female) and 462 (245 male & 217 female) candidate teachers have been attending training in New, Cluster and Linear modalities respectively.
